

SIGNATURE
COMMAND™ SYSTEM

When You Think **Green**, Think
Signature Command™

The Most Innovative and Energy Efficient Fireplace Control System Available Today

The Signature Command™ System is the most feature enhanced and energy efficient collection of fireplace components on the market today. Unlike any other fireplace available, the addition of Signature Command™ gives you the control to make your fireplace the most energy efficient and convenient to operate. Featuring an electronic ignition system and the option of cold climate pilot and flame height control at the touch of a button, automatic battery backup system, accent lighting control and blower speed with time delay control, you'll enjoy the comfort of your fireplace like never before. And, with our innovative Touch Screen thermostat remote control including the "Smart Mode®" feature, your fireplace will be the most energy efficient Green fireplace system on the market today.

The "SC" Signature Command™ System

Command Center Control

The touch button Command Center allows you to control all of your fireplace functions and set ups from one control with the touch of a button. It's easily accessible from the front access panel of the fireplace. The Command Center comes standard with every "SC" & "TSC" system

1. On/Off 3 step variable flame height adjustment with a touch of a button.
2. Automatic uninterrupted battery back-up during power outages.
3. Pilot selection option – Choice of cold climate standing pilot or the energy efficient SC intermittent pilot.
4. Memory shut off remembers your favorite setting the next time the fireplace is turned on.
5. Convenient diagnostic code indication lights.
6. Remote receiver built-in for choice of an easily added optional remote control transmitter.

Convenient Wall Control (as shown in image on cover and opposite page)

Never get on your hands and knees again! The Command Center can be wall mounted with the SCSWEK wall mounting kit, giving you total control of your fireplace from one convenient, upright location. Everything is done with just a touch of a button right from the wall.

Optional A/C Accessory Module

The A/C accessory module gives you control of three optional 120V A/C powered accessories from the (TSFSC) Full Function Touch Screen remote control.

1. Three speed blower control and time delay setting let you set the blower to turn on and off to get the most heat in the most comfortable and efficient way possible
2. Accent lighting with 3 levels of adjustment
3. An on/off auxiliary control to manage extra 120V A/C accessories such as ceiling fans, waterfalls or extra room accent lighting, as shown in image on opposite page.

The addition of the A/C module and full function touch screen remote control turns any fireplace with the standard SC system into the most feature enhanced and innovative system on the market today.

AUTOMATIC BATTERY BACK UP

Our fireplace operation is uninterrupted. With batteries already in place, when the power goes out your fireplace stays on. Competitor models require insertion of batteries at the time of the outage, meaning these fireplace owners must fumble around in the dark for a flashlight, find their batteries, get down on the floor and get into their fireplace to install them in the dark.

The Signature Command is always ready when you are.

PILOT SELECTION OPTIONS

In cold climates flues must be kept warm - but that doesn't mean we should all have to leave the pilot on. If you live in a moderate climate and don't use your fireplace 6-8 months out of the year, take advantage of the energy efficient intermittent pilot with savings up to \$200 a year on fuel!

Unlike many competitors' systems which require A/C to function, the Basic Signature Command™ system can be installed where no power is available.

Shown with rear burner turned down and accent lights active.

The "TSC" Total Signature Command™ System

The Total Signature Command™ System comes standard with all the exciting features of the SC system listed above as well as the A/C accessory module for added control features. In addition, for those fireplace models with a rear burner shut down feature (which gives you the elegance of fire and flame but lowers the heat output as much as 70% when heat is not needed and the ambience of a fire still is), your TSC system allows you to control the rear-burner shutdown from your remote control as well.

The TSC system is completely controlled by the (TSFSC) Full Function Touch Screen remote control with the energy efficient "Smart Mode®" thermostat. You can't find a more feature enhanced and energy efficient fireplace control system on the market today than the Total Signature Command™ System. Available exclusively on Monessen, Majestic and Vermont Castings branded products.

Shown with accent lights active.

Remote Control Options

The Signature Command™ Optional remote controls require no installation, just touch and point to use your new remote control. Signature Command™ remotes come in a wide variety of choices to match the way you want to control your fireplace. Just sit back, relax and realize optimal comfort as you control all the features and functions of your fireplace right from the comfort of your couch.

"Smart Mode®" Thermostat: There are two touch screen remotes – TSTSC, TSFSC – that feature the "Smart Mode®" thermostat option. This feature automatically adjusts the flame height (Hi/Med/Low) to keep an even and more comfortable room temperature while operating the fireplace at its peak efficiency by monitoring and adjusting automatically to the room temperature. If a blower is used it also can be controlled (Hi/Med/Low) automatically along with the flame height. Just sit back and enjoy the comfort and savings and let the "Smart Mode®" thermostat do all the thinking for you.
