Burner Systems:
G18-2-16/18-12(M)(P)
G18-2-16/18-15(M)(P)
G18-2-24-12(M)(P)
G18-2-24-15(M)(P)

Log Sets:
EFV-2-(16/18, 24) Evening Fyre
ESV-2-(16/18, 24) Evening Fyre Split
ECV-2-(16/18, 24) Evening Fyre Charred

Important: Read these instructions carefully and completely before starting installation of the log set.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes.
This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gasses.

This is an unvented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air must be provided. Refer to section entitled VENTILATION AND CONFINED SPACE INFORMATION.

This appliance is designed as an attended appliance. Adults must be present when the unit is operating. Do not leave this unit burning when unattended or while anyone is sleeping.

Installation, service, and the provisions for combustion and ventilation air MUST conform with local codes and with the National Fuel Gas Code, ANSI Z223.1/ NFPA 54, or the CSA B149.1, Natural Gas And Propane Installation Code.

INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.

**Important:**

For safe operation and proper performance of this product and to comply with certification, listings, and building code acceptances, use ONLY Peterson Real-Fyre® controls, parts, and accessories that have been specifically listed or certified for use with this burner system. Use of other controls, parts, or accessories is prohibited and will void all warranties, certifications, listings, and building code approvals, and may cause property damage, personal injury, and loss of life.
G18 SPECIFICATIONS AND REQUIREMENTS

APPROVED INSTALLATIONS
Subject to minimum fireplace size requirements specified below:

1. Solid-fuel-burning fireplaces;
   A) Prefabricated fireplaces listed to UL-127
   B) All other masonry fireplaces
2. Universal-listed vent-free fireplaces.

Note: Installation in any other fireplace is prohibited and will void any approvals and warranties.

The minimum size of fireplace for installation of the Real-Fyre® G18-2 heater gas log set (refer to Fig. 3-1):

The G18 series vent-free gas log sets are available with a variable flame height control valve that can be used with a remote transmitter and receiver (not included with model numbers ending in M or MP).

A spark ignition system (piezo) allows the gas pilot to be lit without the use of matches, and permits the operation of the appliance during a power outage.

This vent-free gas log set is equipped with a pilot safety system with ODS (Oxygen Depletion Sensor). The ODS senses the amount of oxygen available in the room and shuts the log set off before the oxygen level drops below 18%. The pilot can only be relit when fresh air is available. This may require opening a window or a door to another room, or cracking the damper open slightly.

This gas log set has been certified to two standards:
UNVENTED ROOM HEATER-ANSI Z21.11.2b-2007
VENTED DECORATIVE APPLIANCE-ANSI Z21.60b-2004

Check local or state codes to determine if vent-free heaters are permitted in your locality before you install this log set as a vent-free appliance. If not permitted, you may install and operate this log set as a vented appliance.

This unit may not be installed in a vented fireplace with a chimney of less than 15 feet in height.

Observing minimum fireplace dimensions and centering the appliance in the fireplace will assure adequate clearance for operation and servicing. It may be necessary to un-install the unit for some types of service.

</table>
CAUTION: Installation and repair must be done by a qualified professional installer.

Installer: Carefully read these instructions before installing this gas burner system. Be sure you understand all safety precautions and warnings contained in this manual.

A. This appliance is only for use with the type of gas indicated on the rating plate. This appliance is NOT CONVERTIBLE for use with other gasses.

B. CAUTION: If not installed, serviced, and used correctly per these instructions, this product can cause serious personal injury, property damage, or loss of life.

PRE-INSTALLATION AND FIREPLACE PREPARATION SAFETY GUIDELINES

C. WARNING: Before installing in a solid-fuel-burning fireplace, the chimney flue, damper, and firebox must be thoroughly CLEANED of soot, creosote, ashes, and loose paint by a qualified chimney cleaner. Some fireplaces (especially older ones) may need repair prior to installing this appliance.

D. CHECK GAS TYPE (natural or propane): The gas supply must be the same as stated on your burner system rating plate. If gas supply is different, DO NOT INSTALL. Contact your dealer for immediate assistance.

E. Any outside air ducts and/or ash dumps located on the floor or walls of the fireplace must be permanently sealed shut before the installation. Use a heat-resistant sealant. Do not seal the chimney flue damper.

F. INSUFFICIENT GAS PRESSURE WILL KEEP THE ODS (OXGEN DEPLETION SENSOR) PILOT FROM OPERATING PROPERLY. DO NOT USE IF GAS PRESSURE IS LOWER THAN THE MINIMUM REQUIREMENT.

G. The minimum inlet gas-supply pressure for purposes of input adjustment is 5" water column (w.c.) on natural gas and 11" w.c. on propane gas. Insufficient gas pressure will affect proper operation of the ODS pilot. Do not install this gas appliance if minimum pressure is not available. The maximum inlet gas-supply pressure is 10.5" w.c. on natural gas and 13" w.c. on propane gas. The propane source must be regulated. (Do not connect this appliance directly to an unregulated propane gas tank - this can cause an explosion."

H. The gas piping system must be sized to provide minimum inlet pressure at the maximum flow rate (BTU/hr). Undue pressure loss will occur if the pipe is too small, or the run is too long.

I. The minimum clearance from the fireplace opening to combustible materials on side walls and ceiling must be maintained as outlined in MINIMUM CLEARANCE TO COMBUSTIBLES - WALLS AND CEILING.

J. At least 10"-12" of noncombustible or heat-resistant material is required above the fireplace. A fireplace hood will be required to act as a heat deflector in protecting combustible fireplace surrounds (facing and/or mantel) if certain minimum clearances cannot be met.

K. Be certain that combustible flooring material (i.e., carpet, tile, etc.) is not too close to this gas appliance. If this appliance is at floor level or less than 6" above the floor, there must be at least 12" of noncombustible material between the base of the fireplace and any combustible flooring.

L. Input ratings shown in BTU per hour are for elevations up to 2,000 ft. For elevations above 2,000 ft., refer to the National Fuel Gas Code or contact the Robert H. Peterson Company before installing this product.

M. This gas appliance and its main gas valve must be disconnected from the gas-supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig.

N. This gas appliance must be isolated from the gas-supply piping system by closing the equipment shutoff valve connected to the gas-supply line during any pressure testing of the gas-supply piping system at test pressures equal to or less than 1/2 psig.

O. Do not use this appliance if any part has been underwater. Immediately call a qualified profesional service technician to inspect the appliance and to replace any part of the control system and any gas control that has been underwater.

WARNING
THIS APPLIANCE IS EQUIPPED FOR (NATURAL OR PROpane) GAS.
FIELD CONVERSION IS NOT PERMITTED.
ANSI Z21.11.2-2007 UNVENTED ROOM HEATER GENERAL SAFETY INFORMATION

A. WARNING: CARBON MONOXIDE POISONING MAY LEAD TO DEATH.

When used without fresh air, gas appliances may give off carbon monoxide, an odorless, colorless, poisonous gas. Early signs of carbon monoxide poisoning are similar to the flu, with headaches, dizziness, and/or nausea. If you have these signs, the gas appliance may not be installed correctly, or may not be working properly. GET FRESH AIR AT ONCE! STOP USING THE APPLIANCE IMMEDIATELY! Have the appliance serviced before use continues. Some people, including pregnant women; persons with heart or lung disease, asthma, or anemia; those under the influence of alcohol; and persons at high altitudes, are more affected by carbon monoxide than others.

If there are ANY signs of carbon monoxide, GET FRESH AIR AT ONCE! STOP USING THIS APPLIANCE IMMEDIATELY!

B. If any soot appears on the appliance or other areas of the fireplace in which this appliance is installed, shut system off and call a qualified professional service technician, vent-free gas log technician, or your local gas company.

D. This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes. Installation of appliances designed for manufactured homes or mobile homes must conform with the Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280 in the U.S.; or with CAN/CSA Z240 MH, Mobile Housing in Canada; or with ANSI/NCSBCS A225.1/NFPA 501A, Manufactured Home Installations Standard when none of the previously referenced standard are applicable.

E. Eliminate drafts before using the gas appliance by closing heating and air conditioning vents, returns, and outside air vents. Fans blowing directly into the fireplace must be turned off when this appliance is operating.

F. WARNING: This appliance is for installation only in a solid-fuel-burning masonry or UL 127 factory-built fireplace or in a listed ventless firebox enclosure. It has been design certified for these installations. Exception: DO NOT install this appliance in a factory-built fireplace that includes instructions stating it has not been tested or should not be used with unvented gas logs.

G. State and local codes may only allow operation of this appliance in a vented configuration. Check your state or local codes.

H. DO NOT MODIFY THIS VENT-FREE HEATER OR ITS CONTROLS. Any change may be dangerous. Improper installation or use of your vent-free gas appliance can cause serious injury or death from fire, burns, explosions, or carbon monoxide poisoning.
INSTALLATION SAFETY GUIDELINES

A. Carefully inspect the burner and log cartons for shipping damage. If any parts are missing/damaged, call your dealer. **Do not attempt** to install the appliance unless all parts are in good condition.

B. Correct installation of the glass or the ceramic refractory log set and proper placement and installation of burner assembly, including ember placement and Lava Granule placement, are crucial to safe operation of your set. Problems **WILL** occur if all items are not properly installed. Reference INSTALLATION section, LOG PLACEMENT.

C. When installing in a wood-burning fireplace, **place the appliance forward in the fireplace** while making certain that no part of the assembly protrudes (forward) beyond the face of the fireplace. **DO NOT PUSH THE UNIT ALL THE WAY TO THE BACK.**

D. If you use Lava Granules for decorative use, do not allow Lava Granules into or on any part of the burner or on the logs. Lava Granules should only be placed on the floor of the fireplace, in front of and to the sides of the burner, but away from the controls.

E. **DO NOT PLACE** logs or other accessories, such as wood chips, pine cones, or vermiculite, on this appliance. These items will cause improper burning, sooting, and/or high levels of carbon monoxide. Additional logs and/or accessories may be placed around the burner system, as long as they do not interfere with the burning of your gas appliance.

F. **Due to high temperatures, this appliance should be located out of traffic and away from furniture/draperies.**

G. A fireplace screen must be in place when this gas appliance is in operation. Unless other provisions for combustion air are provided, the screen shall have an opening(s) for introduction of combustion air.

H. Connecting directly to an unregulated propane tank can cause an explosion.

I. Special care is required if you are installing the unit into a sunken fireplace. You must raise the fireplace floor to allow access to gas log controls. This will ensure adequate airflow and guard against sooting. Raise the fireplace floor using noncombustible materials.

J. A vent-free room heater having an input rating of more than 10,000 BTU per hour shall not be installed in a bedroom (ANSI Z21.11.2). If local codes allow, you may install a G8-xxR burner, having a rating of 9,500 BTU, in a bedroom. An unvented room heater having an input rating of more than 6,000 BTU per hour shall not be installed in a bathroom (ANSI Z21.11.2).
OPERATING YOUR UNVENTED GAS APPLIANCE SAFELY AND CORRECTLY

A. **SOLID FUEL MUST NOT BE BURNED** in a fireplace where this vent-free gas appliance is installed.

B. **GLASS DOORS MUST BE FULLY OPEN** when this vent-free gas appliance is operating. This appliance **MUST NOT BE ON** if glass doors are closed, as it can lead to sooting, burner outages, and possibly explosion, causing damage or injury.

C. **WARNING: DO NOT ALLOW DRAFTS INTO OR AROUND THE FIREPLACE. CLOSE (SHUT) HEATING AND AIR CONDITIONING VENTS, RETURNS, AND OUTSIDE AIR VENTS. DO NOT OPERATE FANS (WINDOW FANS, CEILING FANS, FLOOR FANS), WHICH MAY ALTER FLAME PATTERNS.** Sooting, excess carbon monoxide, or ODS pilot outages may occur due to drafts.

D. **WARNING: DO NOT USE A BLOWER INSERT, HEAT EXCHANGER INSERT, or any other accessory that is not specifically certified for use with this vent-free gas appliance.**

E. Make sure there is adequate combustion and ventilation air when this gas appliance is operating. You may need to crack the damper or open a window slightly.

F. To light this appliance, it may be necessary to purge the unit for longer than one minute after long periods of non-use.

G. If you operate this vent-free gas appliance fueled by propane, operating characteristics may vary as the fuel in the tank approaches empty (less than 1/4 full). Sooting and other increases in combustion by-products will occur. Turn off the appliance, refill the propane tank, and have the burners cleaned.

H. During manufacturing, various parts of this unit are treated with oils or paints. Though not harmful, they may produce annoying smoke and smells as they are burned off during initial operation. This is a normal occurrence. Initial break-in period should last four to six hours; maximum ventilation should be provided by opening windows, doors, or chimney flue.

I. Keep the area around your gas appliance clear of combustible materials, gasoline, and any other flammable vapors/liquids. Provide adequate clearance for servicing and operation. Be especially cautious if this gas appliance is installed in a basement or converted garage.

J. **Do not place clothing or any flammable material on or near your vent-free gas appliance. Matches, paper, garbage, or any other material must not be thrown on top of the logs, burner, or into the flame.**

K. Young children should be carefully supervised when in the same room with this appliance.

L. Children and adults should be alerted to the hazard of high surface temperatures and should stay away to avoid burns or clothing ignition.
OPERATING YOUR UNVENTED GAS APPLIANCE SAFELY AND CORRECTLY

M. This appliance is intended for supplemental heating, and is not to be used as a primary heating source. Water vapor produced by vent-free gas logs can create moisture problems in a home when operated for extended periods of time. If condensation begins to occur, open your damper or a window.

As a supplemental zone heater, this set should not be used more than six continuous hours per day or more than 40 hours per week. More frequent use indicates that this unit is being used as a primary heat source. The higher presence of carbon monoxide generated by this amount of use can be considered unsafe.

N. If the gas quality is poor or pressure low, your ODS pilot may not stay lit, the burners may produce soot, or the unit may backfire. Contact your local gas supplier immediately.

O. This appliance is designed for adults to be present while in operation. Do not leave this unit burning when unattended or while sleeping. This is an attended appliance.

P. WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.

Q. WARNING: All previously applied loose material, such as embers, must be removed prior to reapplication. All replacement loose material must be purchased from the original appliance manufacturer.

R. Unusually tight construction is defined as:
   
a) Walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of 1 perm (6x10^{11} \text{ kg per pa-sec-m}^2) or less with openings that are sealed or use gaskets;

   b) Weather stripping has been added on openable windows and doors; AND

   c) Caulking or sealants are applied to areas such as joints around window and door frames; between sole plates and floors; between wall-ceiling joints; between wall panels; at penetrations for plumbing, electrical, and gas lines; and at other openings.

CLEANING AND SERVICING IMPORTANT INFORMATION

A. It is crucial that you maintain your unvented gas appliance by having it cleaned and serviced regularly. A qualified professional service technician shall inspect and service this unit at least annually. (Read and follow the CLEANING AND SERVICING sections for details.)

Failure to provide reasonable and necessary maintenance as outlined in the owner’s manual will cause your appliance to malfunction and will void your warranty.
Installation in a confined space.
2. Installation in a tightly constructed home.
3. Installation at high altitudes.
4. Certain medical or physical conditions of the homeowner that may be adversely impacted by combustion products created by burning natural or propane gas.

Your vent-free gas log set SHALL NOT BE INSTALLED IN A CONFINED SPACE or unusually tight construction unless provisions are made for adequate combustion and ventilation air.

The National Fuel Gas Code, ANSI Z223.1/NFPA 54 defines a confined space as a space whose volume is less than 50 cu. ft. per 1,000 BTU per hour (4.8 meters³ per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors, are considered a part of the unconfined space.

An unconfined space is a space where volume is at least 50 cu. ft. per 1,000 BTU per hour (4.8 meters³ per kw) of the aggregate input rating of all appliances in that space. Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors, are considered a part of the space.

**WARNING:** Do not install the unvented burner system where the room is considered a confined space (see Fig. 9-1).

To determine if the area where this gas log set is to be installed fits the definition of an unconfined space, multiply the length of the room by the width of the room by the height of the room, then multiply by 20. The result is the maximum BTU allowed.

\[
\text{Length} \times \text{Width} \times \text{Height} \times 20 = \text{Maximum BTUs allowed}
\]

**Example:** To install a Peterson Real-Fyre® 24” vent-free gas log set with 39,000 BTU (nat. gas) in a space with no other gas-burning appliances, the space MUST be 1,950 cu. ft. or larger (assuming an 8’ ceiling, space dimensions must be a minimum of 243.75 sq. ft., i.e.; 16.3’ x 15’, etc.) (see Fig. 9-1).

**WARNING**
If the area in which the heater may be operated is smaller than that defined as an unconfined space or if the building is of unusually tight construction, provide adequate combustion and ventilation air by one of the methods described in the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation, or applicable local codes.

**Installation in a tightly constructed home and/or installation at high altitudes** may cause your vent-free gas log set to produce excessive heat or excessive moisture. The oxygen depletion sensor may shut down the log set. These conditions may be corrected by opening a window or otherwise increasing the number of air changes in the home.

The Peterson Real-Fyre® vent-free gas log set has been certified to function safely and reliably with emission by-products well within accepted safety and health standards. Your specific medical or physical condition may render you more sensitive to products created by burning natural or propane gas. If this is the case, you should open a window or otherwise increase ventilation.

**REMEMBER**

\[
L \times W \times H \times 20 = \text{MAXIMUM BTUs ALLOWED}
\]

If the space is smaller than the above formula allows, and/or smaller than the examples and diagrams on this page specify, DO NOT install the vent-free gas log set unless provisions for additional combustion and ventilation air are made.
**Clearances to Combustible Construction:**

**Side walls:** 6" from side of fireplace opening (Fig. 10-1)

**Ceiling:** 42" from top of fireplace opening (Fig. 10-1)

**Mantel:** (see Figs. 10-2, 10-3, and paragraph A below)

**Flooring:** (see IN FRONT OF THE FIREPLACE below)

**Note:** Clearances to combustible construction are those distances required to ensure that fireplace mantels, facings, walls, ceilings, and floorings will not catch fire.

In most cases, these clearances should also be adequate to prevent any discoloration or warping due to heat. However, every gas log installation presents a different and unique set of circumstances involving many variables beyond the control of the gas log manufacturer. These include paint or finish composition, previous exposure to heat, methods and quality of construction, airflow patterns, glass doors, fans, or blowers, etc. Because of these variables, we cannot guarantee that heat warping or discoloration will never occur. The potential for heat warping or discoloration may exist no matter what item(s) you are burning in the fireplace, including wood.

**ABOVE THE FIREPLACE:**

To install the unvented gas log set, there must ALWAYS be noncombustible or heat-resistant material immediately above the fireplace opening. Heat-resistant materials (i.e., marble or slate) must be at least $5/8" thick. Sheet metal should not be installed onto combustible materials. If you DO NOT install a fireplace hood, there MUST be at least 12" of noncombustible or heat-resistant material immediately above the fireplace opening (see X in Fig. 10-2 below). If you DO install a fireplace hood, there MUST be at least 10" of noncombustible or heat-resistant material immediately above the fireplace opening (see Y in Fig. 10-3 below). If there is a wooden mantel, shelf, or other combustible projection above the fireplace, follow the information in Fig. 10-2 or Fig. 10-3 below.

**EXAMPLE:** If the fireplace has a combustible projection (mantel or shelf) 20" above the top of the firebox, the maximum horizontal projection out from the face of the fireplace will be:

1. If a fireplace hood is **not installed** - 2.5" (see Fig. 10-2).
2. If a fireplace hood is **installed** - 10" (see Fig. 10-3).

If you cannot meet these minimum clearances, you must operate the unvented gas log set with the chimney flue damper open.

**IN FRONT OF THE FIREPLACE:**

Be certain that combustible flooring material (i.e., carpet, tile, etc.) is not too close to the unvented gas log set.

If the unvented gas log set is at floor level or less than 6" above the floor, there **MUST** be at least 12" (1 foot) of noncombustible material between the front of the fireplace and any combustible flooring.

**Note:** Photos not to scale
This appliance is for installation in a solid-fuel burning fireplace (masonry fireplace or manufactured fireplace) with a working flue and constructed of noncombustible material.

These gas logs may be installed as vented decorative log sets in compliance with ANSI Z21.60b-2004 and National Fuel Gas Code, Section 6.6. The minimum permanent free opening of the fireplace chimney or chimney damper must be met per the Chimney Vent Opening Table on pg 3 of this manual. Chimney damper must be fixed in a manner to maintain permanent free opening at all times. To accomplish this, install a screw or bolt in the edge of the damper to prevent closing, or drill holes in damper or remove damper.

## CONNECTING THE GAS TO THE BURNER SYSTEM

**BEFORE PROCEEDING, CAREFULLY READ ALL OF THE IMPORTANT SAFETY INFORMATION CONTAINED IN THIS OWNER’S MANUAL, INCLUDING:**

A. PRE-INSTALLATION AND FIREPLACE PREPARATION SAFETY GUIDELINES  
B. VENTILATION AND CONFINED SPACE INFORMATION  
C. INSTALLATION SAFETY GUIDELINES

### IMPORTANT

Be sure you have read and understood all safety precautions and warnings contained in this manual.

**Note:** To install the Real-Fyre® vent-free gas log set, the fireplace must have a gas supply line that has been installed by a qualified professional service technician in accordance with all local codes. Refer to the PARTS LIST when installing the vent-free gas log set.

**Tools Required:**

1. Adjustable open-ended wrench  
2. Pliers  
3. Teflon tape or pipe compound resistant to all gasses  
4. Soapy water solution & brush for leak detection  
5. Standard screwdriver  
6. Manometer (for checking gas pressure)

**CHECK GAS TYPE** (natural or propane). The gas supply must be the same as stated on the gas log set rating plate. **If the gas supply is different, DO NOT INSTALL.** Contact the dealer for immediate assistance.

---

**WARNING**  
Do not connect this appliance directly to a high-pressure natural gas line or an unregulated propane tank.

**Refer to the PARTS LIST when installing the vent-free gas log set.**

1. **MAKE SURE THE FIREPLACE GAS SUPPLY IS TURNED OFF.**
2. Center the burner assembly in the fireplace. Make certain that no part of the assembly protrudes beyond the face of the fireplace.
3. Attach the large adapter fitting of the flex connector kit to the fireplace gas-supply line using pipe compound resistant to propane gas, or Teflon tape. Tighten the connection. Connect one end of the flex connector to the large adapter, and the other end to the adapter on valve assembly (see Fig. 17-1).

**LEAK TESTING**

Make sure that the control valve on the burner system is in the **OFF** position. Carefully turn on the gas to the fireplace and leak test at all connections with a soapy water solution (equal parts liquid detergent and water). If bubbles appear, a leak is present. Turn off the gas and tighten all connections, then turn on the gas and repeat the leak test. Repeat until no leaks are detected.

**NEVER USE A FLAME TO CHECK FOR GAS LEAKS.**
W A R N I N G
Do not connect this appliance directly to a high-pressure natural gas line or an unregulated propane tank.

I M P O R T A N T
Check the gas pressure with the gas log set burning and the control set to HIGH.

The gas log set and its main gas valve must be disconnected from the gas-supply piping system during any pressure testing of that system at test pressures in excess of \( \frac{1}{2} \) psig. The gas log set must be isolated from the gas-supply piping system by closing its equipment shut-off valve during any pressure testing of the gas-supply piping system at test pressures equal to or less than \( \frac{1}{2} \) psig. This is accomplished by closing the gas-supply line valve.

CHECKING GAS PRESSURE
Remote-capable safety pilot valve (Fig. 18-1)
Check the valve regulator pressure, which should be checked at the pressure inlet point. Turn the inlet screw counterclockwise two (2) or three (3) turns and then place the tubing of the pressure gauge over the pressure inlet point. (The test inlet point is farthest to the gas-supply inlet.) After taking the pressure reading, turn the inlet screw clockwise firmly to reseal. Do not over-torque. Check for gas leaks.

The unvented burner system will need to be propped up to allow access to the pressure inlet and outlet taps on the bottom side of the valve.

Note: Gas pressure should be checked after connecting the gas and prior to any further installation.

GLOWING EMBER PLACEMENT

The Glowing Embers are supplied in a single bag (Fig. 19-2). It is important that the embers be used in the designated application and that no additional embers be added. **Important:** Do not cover burner with embers; use the supplied embers only. 

**Note:** Be sure that no embers enter the main burner or interfere with the burning of the log set.

**WOOD CHIP PLACEMENT**

The decorative wood chips provided with the log set are for aesthetics only and do not affect operation of the G18-2 log set. The two (2) wood chips with the circular design on top should be placed in front and back of the valve, with at least a 1/2" between it and the valve (Fig. 19-1). The other two (2) wood chips are for the opposite side and are for both front and back (i.e., both fireplace openings).

**CAUTION:** The wood chip may be HOT during and directly after operation of the gas log set. 
**Note:** Do not place the wood chips on the logs or burner.

GLOWING EMBER PLACEMENT

The Glowing Embers are supplied in a single bag (Fig. 19-2). It is important that the embers be used in the designated application and that no additional embers be added. **Open the bag and spread the embers loosely along the entire length of the ember burner (Fig. 19-4), from left to right on the burner and on the vertical portion of the ember burner.** Break up any clumps that may have developed during shipment and make sure the embers are spread evenly over the entire area. Bryte Coals™ are placed over glowing embers, also spread out evenly (Fig. 19-3 & 19-4). Failure to follow these instructions will result in unsafe operation.

**Important:** DO NOT ADD ANY ADDITIONAL EMBERS OR BRYTE COALS™ TO THIS LOG SET. ANY ADDITIONAL EMBERS MAY CAUSE UNSAFE OPERATION.
LOG PLACEMENT STEPS

Each log in the Real-Fyre® heater gas log set is numbered to aid in the log placement procedures. Each log also has seating notches that stabilize the logs together in their correct position.

16/18” LOG SET

1. Both bottom logs are equipped with specific indentations for both the valve (Log #1) and the ODS pilot (Log #2). Position the logs according to these cutaways, as shown in Fig. 20-1.

2. Position the middle top log (Log #3) on the top of the bottom logs (Logs #1 and #2). Fit into matching notches as shown in Fig. 20-2.

3. Position the two (2) “Y”-shaped top logs (Logs #4) over the bottom logs as shown in Fig. 20-3. Place one side of “Y”-shaped log over the notch on middle top log (Log #3) and the other side on notch over the bottom logs (Logs #1 and #2).

24” LOG SET

1. Use the space between the grate and main burner as a guide to set the two (2) bottom logs (Logs #1) in their approximate positions, as shown in Fig. 20-4.

2. Position the two (2) “Y”-shaped top logs (Logs #2) on top of the two (2) bottom logs (Logs #1), as shown in Fig. 20-5. Fit the “Y”-shaped log into the notch on the bottom log (Log #1), and the other two ends into the notches on the opposite bottom log.

3. Position the two (2) top side logs (Logs #3) over the bottom logs (Logs #1) as shown in Fig. 20-6. Place top log over the matching notch on the bottom log and the other side over the notch on the “Y”-shaped log (Log #2).
After setting the logs into position as described on the previous page, ensure each is properly and firmly seated. The vent-free gas log set will not function as intended if the logs are not correctly positioned. When placed properly, the flames will not strike any portion of the top logs. Periodically check the positioning of all logs to ensure proper log placement and stability. If any flame is striking the top logs, recheck log placement. Adjust to conform with these instructions. There should be no flame impingement on these logs.

CAUTION: BURN HAZARD. Logs will remain hot for some time after use. You must maintain the log layout as shown to ensure proper operation of the log set. If you need to reposition any log to maintain the proper layout, use heat-resistant gloves or allow logs adequate time to cool before handling.

After setting the logs into position as described on the previous page, ensure each is properly and firmly seated. The vent-free gas log set will not function as intended if the logs are not correctly positioned. When placed properly, the flames will not strike any portion of the top logs. Periodically check the positioning of all logs to ensure proper log placement and stability. If any flame is striking the top logs, recheck log placement. Adjust to conform with these instructions. There should be no flame impingement on these logs.

DAMPER CLAMP INSTRUCTIONS (IF APPLICABLE)

The damper clamp with hex bolt (Fig. 21-1) is provided as a means to prevent full closure of the damper blade. The clamp is easily attached to most damper blades with pliers or a wrench, and must be permanently installed. The clamp is designed to prevent accidental closure of the damper when installed as illustrated (Fig. 21-2 and Fig. 21-3). Should the clamp not fit, or fail to provide the permanent vent opening specified in Table 3-1, have a permanent stop installed, remove the damper blade, or have the damper cut to provide the minimum permanent opening required.

Note: We recommend that before you install the log set, you familiarize yourself with the control valve layout. This will help you to be confident operating the log set when fully installed.
CLEANING AND SERVICING SAFETY INFORMATION

Note: Regular cleaning and servicing will be necessary to ensure proper ODS pilot operation and proper burn characteristics.

A. Always shut off the gas to the unvented gas log set while performing service work.

B. Allow the unvented gas log set to cool before servicing.

C. Installation and repair must be done by an NFI Certified or other qualified professional service technician. The gas log set should be inspected regularly to prevent burner shutdown, sooting, odors, etc. This unit must be inspected and cleaned annually by a qualified professional service technician. It must be checked for clean burning operation and proper ODS pilot appearance, with the correct tools to service this unit. More frequent cleaning may be required. Excessive lint can build up on this unit from carpeting, bedding material, pet hairs, or other particles in the air. It is critical that all control components, burners, and circulating air passageways be kept clean and free of all obstructions. The ODS pilot is especially sensitive to a dirty environment and will not function properly if dirty. Make certain all air openings are clean and free of obstructions, including:

1. The air intake opening on the ODS pilot assembly.
2. The ODS pilot opening.
3. The air shutters on both the front/bottom ember burner and the rear/top main burner.
4. The flash tube and its corresponding carryover ports. Obstructions in or around the flash tube may result in the ember burner not lighting and/or an intermittent popping noise from the flash tube.

WARNING: Failure to keep the primary air openings of the burner(s) clean may result in sooting and property damage.

5. All of the ports on both the front/bottom ember burner and the rear/top main burner. (See the CLEANING AND SERVICING section.)

D. Any safety screen or guard removed for servicing must be replaced prior to operating this gas log set.

E. Decorative wood chip (if included) must be placed at least a \( \frac{1}{2} \) inch away from burner controls to avoid damaging the controls by overheating due to heat reflection (see Fig. 22-2).
Only limited cleaning will be required under normal use of the unvented gas log set.

TO CLEAN THE LOG SET

1. Remove the log set and embers. Use a vacuum cleaner to remove loose particles from all surfaces of the log set. Do not use cleaning fluids.

2. Dust the grate, the assembly, and the burners. Using a compressed air duster (commonly available at computer, electronic, or office supply stores); blow through the flash tube, its corresponding carry over port, and all of the burner ports. See Fig. 25-1 on the previous page for locations.

3. Reinstall the log set and embers as instructed in this manual.

If, after a period of use, the flames start to exhibit unusual shapes and behavior, or the burners fail to ignite smoothly, the burner ports may require some cleaning. If this happens, it is preferable to contact the nearest dealer to get the unvented gas log set serviced.

Do not remove the rating plates or the warning tags. These are an integral safety and identification component of this appliance.

During periods of heavy use, inspect the unvented gas log set frequently for evidence of sooting. If sooting is present, discontinue use until the source of sooting is corrected.

CLEANING AND SERVICING THE ODS PILOT

Periodic cleaning and maintenance of the unvented gas log set is recommended to ensure that the log set operates properly. Cleaning of the ODS pilot system is an important part of the maintenance program.

This ODS pilot cleaning procedure must be performed by a qualified professional service technician familiar with the specific characteristics of the log set.

1. Turn the unvented gas log set to the OFF position and allow it to cool. Inspect the ODS pilot area (see Fig. 23-1) for any visual contamination or debris (usually lint, hair, spider webs, or small insects). Lightly brush off all external surfaces while vacuuming loosened debris from the ODS pilot opening. Be careful not to brush any foreign material into the ODS pilot opening.

2. Clean out the air intake opening (see Fig. 23-1) by lightly brushing around the opening while vacuuming. Note: It is very important that the air intake opening be kept clear of debris. Should the opening become blocked, the ODS pilot system will not operate properly.

3. Light the ODS pilot according to the relevant LIGHTING INSTRUCTIONS page. Periodically verify the ODS pilot flame appears as shown in the CHECKING THE ODS PILOT FLAME APPEARANCE section.

4. If the ODS pilot flame does not burn as indicated in the instructions, extinguish the ODS pilot by turning the valve to the full OFF position. Using a compressed air duster, insert the flexible nozzle through the air intake opening, ensuring that the nozzle is pointed toward the ODS pilot opening (see Fig. 23-1). Blow air through the air intake opening to clear out any debris that may be in the system.

5. Relight the ODS pilot and inspect it to be sure it is burning as shown in the instructions. If not, extinguish the ODS pilot and turn off the gas supply to the gas log set. Using an adjustable or a 1/4" wrench, disconnect the ODS pilot gas line (see Fig. 23-1) from the valve.

6. Insert the flexible nozzle of the compressed air duster and blow air into the input end of the ODS pilot gas line to remove any blockages. Do not blow air directly into the ODS pilot opening. Blow air in the direction of the gas flow.

7. Reinstall the ODS pilot gas line and check for leaks.

8. Light the ODS pilot to make sure it is operating properly (see LIGHTING INSTRUCTIONS).

9. If the ODS pilot still does not operate properly, the ODS pilot may need to be replaced with the same model as the one on the unvented burner.
Observe the flames. The main burner flames should be blue at the base and a combination of blue/yellow at the body and at the tips. They should be 5" to 8" above the logs, with the center flame being the tallest (see Fig. 24-1). Front flames in the ember burner should be 1/4" above the embers.

Every Real-Fyre unvented gas log set leaves the factory tested and quality checked to ensure that it has been manufactured to the strict specifications to which it was submitted and approved for certification. This check includes an operational test to ensure both satisfactory combustion and operation.

Each installation site for any unvented appliance presents its own unique combustion environment. Specific factors such as weather-tightness of the home, size of the room in which the log set is installed, central heating, ceiling fans, altitude, drafts, pet hair, carpet lint, dryer lint, the size of the fireplace, paint or soot inside the fireplace, etc. all have an influence on the proper operation of an unvented appliance and its ODS pilot system. A normally operating unvented log set will demonstrate the following characteristics:

- A lively, realistic flame and front ember glow. The flame will be blue/yellow on the front burner and on the rear burner.
- Clean-burning combustion that will produce no soot or smoke after normal break-in.
- Production of no odor, other than normal odors associated with the combustion of propane or natural gas.
- Production of water vapor. Water vapor helps to increase indoor humidity, which may be beneficial during the dry heating season.

If you operate the unvented gas log set fueled by propane gas, operating characteristics may vary as the fuel in the tank approaches empty (less than 1/4 full). Sooting and other increases in combustion by-products will occur. Turn off the log set and refill the propane tank.

**CHECKING THE ODS PILOT FLAME APPEARANCE**

**WARNING: NO ADJUSTMENTS ARE TO BE MADE TO THE ODS PILOT SYSTEM. TAMPERING WITH THIS SYSTEM CAN BE EXTREMELY HAZARDOUS.**

When installing the burner assembly, it is important to visually check the ODS pilot flame and the burner flames.

1. The ODS pilot flame must be present when the burner is operating. The flame should touch the top of the thermocouple tip (Fig. 24-2 and Fig. 24-4).
2. If the ODS pilot flame does not touch the top of the thermocouple tip, then the main burner will not function properly (see Fig. 24-3 and Fig. 24-5 for incorrect ODS pilot flame).
3. With the burners off and the ODS pilot flame off, and the assembly cool, check the burner assembly, air intake openings on the ODS pilot, and air shutter openings on the burner for any blockages that could affect the operation of the ODS pilot flame.

Do not use this appliance if any part has been underwater. Immediately call for a qualified professional service technician to inspect the appliance and to replace any part of the control system and any gas control that has been underwater.

The Real-Fyre® burner system has an ODS pilot. When starting the ODS pilot, follow these instructions exactly.

BEFORE LIGHTING, smell all around the gas burner system area for gas. Be sure to smell next to the floor, as some gas is heavier than air and will settle on the floor. IF YOU SMELL GAS, FOLLOW THE INSTRUCTIONS ON P. 1.

Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified professional service technician. Force or attempted repair may result in fire or explosion.

LIGHTING THE ODS PILOT

1. Turn the ignitor control knob (Fig. 25-1) on the burner control valve assembly to the side of the burner pan counterclockwise so that the narrowing part of the knob moves from the OFF position, slightly toward IGN, until reaching the stop.

2. Press the ignitor control knob in and hold in for five seconds (only ODS pilot gas will flow).

3. Continue pressing in while turning the ignitor control knob further counterclockwise toward the PILOT position, until you hear a click. The click is an indication that the piezo ignitor has been activated.

Note: If the spark from the piezo ignitor does not light the ODS pilot, repeat steps 2 & 3 until the ODS pilot lights.

4. Continue to hold the ignitor control knob in the PILOT position for 30 seconds after the ODS pilot has been lit to allow the thermocouple to detect the ODS pilot flame.

Note: The ODS pilot flame should always be present when the burner system is in operation, and should just envelop the tip of the thermocouple.

IGNITING THE MAIN BURNER

1. When the ODS pilot flame is stable, release the ignitor control knob and turn counterclockwise to the ON position to enable the main burner.

2. Turn the flame-height control knob (Fig. 25-3) counterclockwise to the fully ON position (Fig. 25-4) to ignite the burner at maximum BTU. After the main burner ignites, adjust the flame height as indicated below.

ADJUSTING THE FLAME HEIGHT

1. To adjust the flame, turn the flame-height control knob (Fig. 25-3) counterclockwise to increase the flame height, or clockwise to decrease the flame height, until the flames have the desired characteristics.

2. When you are finished enjoying your fire, turn the flame-height control knob to OFF. The ODS pilot will remain lit. The burner system can be relit by rotating the flame-height control knob toward ON.

SHUTTING OFF THE ODS PILOT

If you do not plan on using your burner system for an extended period, you may elect to extinguish the ODS pilot. To do this, rotate the flame-height control knob to the OFF position and then rotate the ignitor control knob to the OFF position (Fig. 25-1).

Important: When shutting your burner down, be sure to TURN THE FLAME FULLY OFF (to PILOT or OFF). Make sure the burner is completely off for one minute before relighting.

If this unit was shipped with a remote, or if a remote system was installed later, read and follow the separate remote instructions to operate the burner remotely.
1. Locate your Series 12 control valve (p. 15). Turn the control knob (Fig. 26-4) from the OFF position (see Fig. 26-1) slightly counterclockwise to PILOT (see Fig. 26-2). Press the control knob in and hold for 10 seconds (only pilot gas will flow). Continue pressing control knob and push the piezo ignitor (see Fig. 26-4). You should hear a click, and pilot should light. Repeat this step until the pilot lights. Continue to hold the control knob in the PILOT position for 30 seconds after the pilot has been lit.

2. The pilot flame should now remain lit. It should always be present when the unvented gas log set is in operation and should just envelop the tip of thermocouple. If pilot light goes out, repeat step 1. If pilot will not stay lit after several tries, follow the instructions TO TURN OFF GAS TO APPLIANCE in your Owner's Manual and call your service technician or gas supplier.

3. When the pilot flame is stable (remains lit), release the control knob and turn counterclockwise to the ON position (see Fig. 26-3) (at stop).

4. To ignite main burner, move burner ON/OFF toggle switch (see Fig. 26-4) to ON (up). Main burner will ignite.

The flame height and heat output of your log set can be adjusted by turning the flame height knob (see Figs. 26-4, 26-5) to HI or LO as you wish to reach your desired heat level/flame height. When you are finished enjoying your log set, simply move the burner toggle switch to OFF (down). In this position, the pilot will remain lit, and the log set can be relit by moving the switch to ON.

If you do not plan on using your log set for an extended period, you may elect to extinguish the pilot. To do this, move the toggle switch to OFF, then rotate the control knob clockwise, depressing the knob slightly as you pass PILOT, to the OFF position (a stop). This will require that you relight the pilot before you use the log set again.

Note: When completely shutting your log set down, be sure to TURN THE FLAME FULLY OFF (turn from ON through PILOT to OFF). Make sure the burner is completely off for 1 minute before relighting!

If this unit was shipped with a remote, or if a remote system was installed later, read and follow the separate remote instructions to operate the burner remotely.

<table>
<thead>
<tr>
<th>POSSIBLE CAUSE</th>
<th>SOLUTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A.</strong> Insufficient or excessive gas pressure</td>
<td><strong>A1.</strong> Check gas pressure (check with local gas company). For natural gas, pressure must be minimum 5” w.c. at fireplace with burner operating. Maximum inlet gas pressure is 10.5”, w.c. Reading at inlet pressure tap (farthest to valve inlet) on remote-capable valves burners should be 5” w.c. (minimum). With the knob on high, maximum inlet pressure is 10.5” w.c.</td>
</tr>
<tr>
<td><strong>A2.</strong> Other gas appliances may be on the same gas line, dropping gas pressure to the log set. Check pressures with everything operating to ensure adequate pressure.</td>
<td><strong>B.</strong> Foreign debris in or around the fireplace and around the air intake of the ODS pilot</td>
</tr>
<tr>
<td><strong>B.</strong> Dust, carpet fibers, paper, spider webs, pet hair, etc. in fireplace or on burner assembly can affect operation of burner and ODS pilot assembly. Clean out debris and vacuum around burner for accumulated dust. Vacuum or use compressed air to clean out the ODS pilot assembly area, air shutter holes, burner orifices, and ODS pilot air intake openings. Blockage in this area will affect the operation of the ODS pilot assembly.</td>
<td><strong>C.</strong> Room size (unconfined space)</td>
</tr>
<tr>
<td><strong>C.</strong> 50 cu. ft. is required for every 1,000 BTU. Multiply the room’s length x width x height by 20 (L x W x H x 20). If resulting number is less than the BTU rating of the burner, ODS pilot outages may occur. Provisions for adequate combustion and ventilation air must be made (see VENTILATION AND COMBINED SPACE SAFETY INFORMATION).</td>
<td><strong>D.</strong> Log placement</td>
</tr>
<tr>
<td><strong>D.</strong> Your logs may have notches for correct placement. The burner may have brackets for correct placement. Make sure log set is placed in proper position (see LOG PLACEMENT) so there is no flame impingement on the log set.</td>
<td><strong>E.</strong> Flue area, fireplace, or damper dirty from soot</td>
</tr>
<tr>
<td><strong>E.</strong> Clean around, above, and under damper thoroughly. Clean fireplace, removing loose material, including soot and creosote.</td>
<td><strong>F.</strong> Fans, furnaces, air conditioning vents, returns, or fireplace outside air vents near or blowing into fireplace may create drafts, altering flame patterns</td>
</tr>
<tr>
<td><strong>F.</strong> Eliminate drafts by closing heating and air conditioning vents, returns, and closing outside air vents. Fans blowing directly into the fireplace should be turned off when set is operating.</td>
<td><strong>G.</strong> Blockages on burner</td>
</tr>
<tr>
<td><strong>G.</strong> Vacuum any Lava Granules or material that may have fallen onto burner pipe area</td>
<td><strong>H.</strong> Fireplaces with high top cavities can accumulate by-products of combustion, which can start recirculating, causing shutdown</td>
</tr>
<tr>
<td><strong>H.</strong> Open window or damper slightly. Move burner forward if possible, or otherwise increase ventilation.</td>
<td><strong>I.</strong> Insufficient air circulation</td>
</tr>
<tr>
<td><strong>I.</strong> Check log placement, Glowing Ember placement, Bryte Coals™ placement, and sizing of log set (check your owner’s manual for proper placement and requirements). Reposition burner closer to the front of fireplace. <em>(Note: Do not place burner too close to combustibles.)</em> (See INSTALLATION SAFETY GUIDELINES section.)</td>
<td><strong>J.</strong> Fireplace too small for unit</td>
</tr>
<tr>
<td><strong>J.</strong> Ensure minimum requirements are met (see FIREPLACE SIZE REQUIREMENT section).</td>
<td><strong>K.</strong> At high altitude, too much heat or moisture can cause ODS pilot to shut down log set</td>
</tr>
<tr>
<td><strong>K.</strong> Open a window or the damper slightly or otherwise increase the ventilation. Your set may not be certified for use over 2,000 feet. Check your owner’s manual.</td>
<td><strong>L.</strong> ODS pilot flame lifting off thermocouple/generator</td>
</tr>
<tr>
<td><strong>L.</strong> Check gas pressure (see item A1 in this table).</td>
<td><strong>M.</strong> Soot inside burner</td>
</tr>
<tr>
<td><strong>M.</strong> Take burner tube out of unit and shake it or tap it to loosen soot inside burner. Clean thoroughly and place burner tube back onto unit.</td>
<td><strong>N.</strong> Pilot (remote-capable)</td>
</tr>
<tr>
<td><strong>N.</strong> Contact your dealer for instructions on replacement.</td>

PETEerson vent-free gas log sets

limited warranty

All Peterson vent-free ceramic refractory gas logs are Warranted for as long as you own them (lifetime).

All Peterson vent-free fiber ceramic gas logs are Warranted for Seven (7) years.

All Peterson vent-free burner component parts, except valves, ODS pilots, and controls, are Warranted for Ten (10) years.

All Peterson valves, ODS pilots, and controls are covered by a one (1) year limited warranty (excluding batteries).

Please keep a copy of your sales slip for proof of purchase

This warranty applies to the original purchaser and to single family residential use only. It commences from date of purchase, and is valid only with proof of purchase.

This warranty does not cover parts becoming defective through misuse, accidental damage, electrical damage, improper handling, storage, and/or installation. Product must be installed (and gas must be connected) as specified in the instructions or operator's manual, by a qualified professional installer. Accessories, parts, valves, Remotes, etc., when used must be Peterson Co. product.

This warranty does not apply to rust, corrosion, oxidation, or discoloration, unless the affected component becomes inoperable. It does not cover labor or labor-related charges.

This warranty specifically excludes liability for indirect, incidental, or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that may vary from state to state.

For additional information regarding this warranty, or to place a warranty claim, contact the R.H. Peterson dealer where the product was purchased.

To register your product online go to: WWW.RHPETEson.COM, and click on product registration. Thank you for your purchase.

When used in the commonwealth of Massachusetts

Installation of this appliance must be performed by a Massachusetts licensed plumber or gas fitter only.

the installation of this appliance must conform to the board of fire prevention regulations 527 CMR 30.00 unvented propane or natural gas-fired space heaters.

This vent-free gas appliance is designed for use in a standard wood-burning fireplace. It is designed to be used with an external wall switch or external remote thermostatic control system. Models with the suffix 12(P) or 01(P) are designed to be used with an external wall switch or an external remote wall thermostatic control system.
