RH PETERSON co. PREMIUM GAS LOGS

OWNER'S MANUAL

Burner Systems:

G21-GL-18-12(P) G21-GL-24-12(P) G21-GL-30-12(P)

FOR USE WITH FYRE GLASS / FYRE GEMS

DESIGN CERTIFIED to standards:

Unvented Room Heater ANSI Z21.11.2-2007 and Vented Decorative Appliance ANSI Z21.60b-2004

G21-GL UNVENTED BURNER SYSTEMS FOR INDOOR OR OUTDOOR USE

INSTALLER: Leave this manual with the appliance CONSUMER: Retain this manual for future reference

Installation and service must be performed by a qualified professional installer, service agency, or the gas supplier.

▲ WARNING: If the information in this manual is not followed exactly, a fire or explosion may result, causing property damage, personal injury, or loss of life.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

WHAT TO DO IF YOU SMELL GAS:

- Open a window.
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
- If you cannot reach your gas supplier, call the fire department.

It is imperative that you maintain your unvented gas appliance by having it cleaned and serviced regularly. See pages 11,17 & 18 for details.

Important

Read these instructions carefully and completely before starting installation of the burner system.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gasses.

This is an UNVENTED gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate combustion and ventilation air MUST be provided. See section entitled VENTILATION AND CONFINED SPACE INFORMATION.

This appliance is designed as an **attended appliance**. Adults must be present when the unit is operating. Do not leave this unit burning when unattended or while anyone is sleeping.

Installation, service, and the provisions for combustion and ventilation air MUST conform with local codes and with the *National Fuel Gas Code*, ANSI Z223.1/ NFPA 54, or the CSA B149.1, *Natural Gas And Propane Installation Code*.

ROBERT H. PETERSON CO. • 14724 East Proctor Avenue • City of Industry, CA 91746

SPECIFICATIONS AND REQUIREMENTS

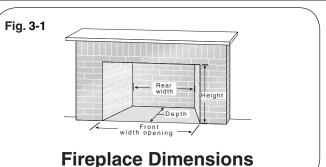

WARNING: This appliance is for installation only in a:

- 1. Solid-fuel-burning masonry or UL-127 factory-built fireplace, or
- 2. Listed ventless firebox enclosure.

It has been designed certified for these installations. Exception: DO NOT install this appliance in a factory built fireplace that includes instructions stating it has not been tested or should not be used with unvented gas logs.

Note: Installation in any other fireplace is prohibited and will void any approvals and warranties.

Any installation of this appliance is subject to minimum fireplace size requirements below:

The **minimum size** of fireplace for installation of Real-Fyre[®] unvented gas burner system: (refer to Fig. 3-1)

Burner Model	Minimu	m Fireplace Size	BTU Input Rating		
Dumer wouer	Width	Depth	Height	Natural Gas	Propane Gas
G21-GL-18-12(P)	22" front 16" rear *	10"	15"	30k	27k
G21-GL-24-12(P)	28" front 21" rear *	11"	15"	35k	30k
G21-GL-30-12(P)	34" front 28" rear *	11"	15"	40k	35k

* based on minimum depth

A spark ignition system (piezo) allows the gas pilot to be lit without the use of matches, and permits the operation of the appliance during a power outage.

This burner system is equipped with an Oxygen Depletion Sensor (ODS) safety pilot system. The ODS senses the amount of oxygen available in the room and shuts the burner system off before the oxygen level drops below 18%. The pilot can only be relit when fresh air is available. This may require opening a window or a door to another room or cracking the damper open slightly.

This burner system has been certified to two standards:

UNVENTED ROOM HEATER-ANSI Z21.11.2.2-2007

VENTED DECORATIVE APPLIANCE-ANSI Z21.60b-2004

Check local or state codes to determine if vent-free heaters are permitted in your locality before you install this burner system as a vent-free appliance. If not permitted, you may install and operate this burner system as a vented appliance.

This unit may not be installed in a vented fireplace with a chimney of less than 15 feet in height.

Observing minimum fireplace dimensions and centering the appliance in the fireplace will assure adequate clearance for operation and servicing. It may be necessary to uninstall the unit for some types of service.

Minimum Permanent Chimney Vent Opening
in sq. in. (when used as a vented appliance)

Table 3-1	Factory built fireplaces				
Chimney Height	18"	24"	30"		
15'	19	22	25		
20'	17	20	23		
25'	16	19	22		
30'	15	18	20		

*For masonry-built fireplaces, add 4 sq in to amount shown.

Important: For safe operation and proper performance of this product and to comply with certification, listings, and building code acceptances, use ONLY Peterson Real-Fyre® controls, parts, and accessories that have been specifically listed or certified for use with this burner system. Use of other controls, parts, or accessories is prohibited and will void all warranties, certifications, listings, and building code approvals, and may cause property damage, personal injury, and loss of life.

IMPORTANT SAFETY INFORMATION

ANSI Z21.11.2-2007 UNVENTED ROOM HEATER GENERAL SAFETY INFORMATION

A. WARNING: CARBON MONOXIDE POISONING MAY LEAD TO DEATH.

When used without fresh air, gas appliances may give off carbon monoxide, an odorless, colorless, poisonous gas. Early signs of carbon monoxide poisoning are similar to the flu, with headaches, dizziness, and/or nausea. If you have these signs, the gas appliance may not be installed correctly, or may not be working properly. GET FRESH AIR AT ONCE! STOP USING THE APPLIANCE IMMEDIATELY! Have the appliance serviced before use continues. Some people, including pregnant women; persons with heart or lung disease, asthma, or anemia; those under the influence of alcohol; and persons at high altitudes, are more affected by carbon monoxide than others.

If there are ANY signs of carbon monoxide, GET FRESH AIR AT ONCE! STOP USING THIS APPLIANCE IMMEDIATELY!

- **B.** If any soot appears on the appliance or other areas of the fireplace in which this appliance is installed, shut system off and call a qualified professional service technician, **vent-free gas burner system technician**, or your local gas company.
- **C.** This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes. Installation of appliances designed for manufactured homes or mobile homes must conform with the *Manufactured Home Construction and Safety Standard, Title 24 CFR, Part 3280* in the U.S.; or with *CAN/CSA Z240 MH, Mobile Housing* in Canada; or with *ANSI/NCSBCS A225.1/NFPA 501A, Manufactured Home Installations Standard* when none of the previously referenced standard are applicable.
- **D.** Eliminate drafts **before** using the gas appliance by closing heating and air conditioning vents, returns, and outside air vents. Fans blowing directly into the fireplace must be turned off when this appliance is operating.
- E. WARNING: This appliance is for installation only in a solid-fuel-burning masonry or UL 127 factory-built fireplace or in a listed ventless firebox enclosure. It has been design certified for these installations. Exception: DO NOT install this appliance in a factory-built fireplace that includes instructions stating it has not been tested or should not be used with unvented gas burner systems.
- F. WARNING: DO NOT MODIFY THIS VENT-FREE HEATER OR ITS CONTROLS. Any change may be dangerous. Improper installation or use of your vent-free gas appliance can cause serious injury or death from fire, burns, explosions, or carbon monoxide poisoning.
- **G.** State and local codes may only allow operation of this appliance in a vented configuration. Check your state or local codes.
- H. WHEN INSTALLING AS A DECORATIVE VENTED APPLIANCE, THE UNIT MUST CONFORM TO ALL LOCAL CODES AND TO THE LATEST EDITION OF THE NATIONAL FUEL GAS CODE ANSI Z223.1/NFPA54.

VENTILATION AND CONFINED SPACE SAFETY INFORMATION

Your vent-free gas burner system SHALL NOT BE INSTALLED IN A CONFINED SPACE or unusually tight construction unless provisions are made for adequate combustion and ventilation air.

- The National Fuel Gas Code, ANSI Z223.1/NFPA 54 defines a confined space as a space whose volume is less than 50 cu. ft. per 1,000 BTU per hour (4.8 meters³ per kw) of the aggregate input rating of all appliances installed in that space.
- An unconfined space is a space where volume is <u>at least 50 cu. ft.</u> per 1,000 BTU per hour (4.8 meters³ per kw) of the aggregate input rating of all appliances in that space.
- Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors, are considered a part of the unconfined space.

WARNING: Do not install the unvented burner system where the room is considered a confined space (see Fig. 5-1).

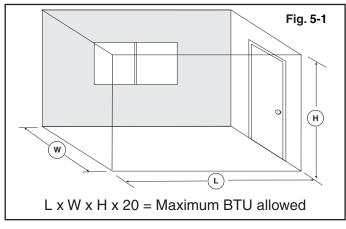

To determine if the area where this burner system is to be installed fits the definition of an unconfined space, multiply the length of the room by the width of the room by the height of the room, then multiply by 20. The result is the maximum BTU allowed.

(Length x Width x Height x 20 = Maximum BTUs allowed)

Example: To install a Peterson Real-Fyre[®] vent-free gas burner system with 36,000 BTU, maximum, in a space with no other gas-burning appliances, the space **MUST** be 1,800 cu. ft. or larger.

Assuming an 8' ceiling, floor dimensions must be a minimum of 225 sq. ft.,

i.e.; 18'x12.5'=225 sq ft (see Fig. 5-1).

WARNING

If the area in which the heater may be operated is smaller than that defined as an unconfined space or if the building is of unusually tight construction, provide adequate combustion and ventilation air by one of the methods described in the National Fuel Gas Code, ANSI Z223.1/NFPA 54, Air for Combustion and Ventilation, or applicable local codes.

REMEMBER

L x W x H x 20 = MAXIMUM BTUS ALLOWED If the space is smaller than the above formula allows, and/or smaller than the examples and diagrams on this page specify, DO NOT install the vent-free burner system <u>unless</u> provisions for additional combustion and ventilation air are made. IT MAY BE NECESSARY TO OPEN A WINDOW SLIGHTLY (1"- 2") OR OTHERWISE INCREASE VENTILATION. CONDITIONS REQUIRING THIS INCLUDE, BUT ARE NOT LIMITED TO:

- 1. Installation in a CONFINED SPACE.
- 2. Installation in a HOME OF UNUSUALLY TIGHT CONSTRUCTION**.
- 3. Installation at HIGH ALTITUDES.
- 4. Certain MEDICAL OR PHYSICAL CONDITIONS OF THE HOMEOWNER that may be adversely impacted by combustion products created by burning natural or propane gas.

Installation in a tightly constructed home and/ or installation at high altitudes may cause your vent-free burner system to produce excessive heat or excessive moisture. The oxygen depletion sensor may shut down the burner system. These conditions may be corrected by opening a window or otherwise increasing the number of air changes in the home.

******Unusually tight construction is defined as construction where: a. Walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of 1 perm (6x10⁻¹¹ kg per pa-sec-m²), or less with openings gasketed or sealed;

b. Weather stripping has been added on openable windows and doors, and

c. Caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.

The Peterson Real-Fyre® vent-free burner system has been certified to function safely and reliably with emission by-products well within accepted safety and health standards. **Your specific medical or physical condition** may render you more sensitive to products created by burning natural or propane gas. If this is the case, you should open a window or otherwise increase ventilation.

MINIMUM CLEARANCES TO COMBUSTIBLES

If the vent-free gas log set is installed in a factory built fireplace, follow the manufacturer's guidelines for minimum clearances to combustibles.

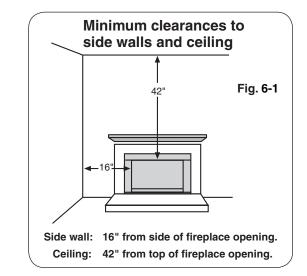

In the absence of such guidelines, follow the instructions below:

Clearances to Combustible Construction:

Sidewalls: 16" from side of fireplace opening (Fig. 6-1). Ceiling: 42" from top of fireplace opening (Fig. 6-1). Flooring: See section A below. Mantel: See section B below & Fig. 6-1, 7-1, & 7-2).

Note: Clearances to combustible construction are those distances required to ensure that fireplace mantels, facings, walls, ceilings, and floorings will not catch fire.

In most cases, these clearances should also be adequate to prevent any discoloration or warping due to heat. However, every gas log installation presents a different and unique set of circumstances involving many variables beyond the control of the gas log manufacturer. These include paint or finish composition, previous exposure to heat, methods and quality of construction, air flow patterns, glass doors, fans or blowers, etc. Because of these variables, we cannot guarantee that heat warping or discoloration will never occur. The potential for heat warping or discoloration may exist no matter what item(s) you are burning in the fireplace, including wood.

The dimensions in Fig. 6-1 are <u>MINIMUM</u> <u>CLEARANCES</u> to maintain when you install this gas log set. <u>BOTH SIDES</u> of the fireplace opening <u>MUST</u> <u>BE AT LEAST 16</u>" from any combustible sidewalls. The ceiling <u>MUST BE</u> at least <u>42</u>" from the top of the fireplace opening.

A. IN FRONT OF THE FIREPLACE:

Be certain that combustible flooring material (i.e.: carpet, tile, etc.) is not too close to the vent-free gas log set. If the vent-free gas log set <u>is at floor level or less than 6" above the floor, there **MUST** be at least 12" (1 foot) of noncombustible material between the front of the fireplace and any combustible flooring.</u>

B. ABOVE THE FIREPLACE:

To install the vent-free gas log set, there must <u>ALWAYS</u> be noncombustible or heat resistant material immediately above the fireplace opening. Heat resistant materials (i.e., marble or slate) must be at least $\frac{5}{8}$ " thick. Sheet metal should not be installed onto combustible materials.

If you <u>DO NOT</u> install a fireplace hood, there <u>MUST</u> be at least <u>12</u>" of noncombustible or heat resistant material immediately above the fireplace opening (**see X** in Fig. 7-1). If you <u>DO</u> install a fireplace hood, there <u>MUST</u> be at least <u>10</u>" of noncombustible or heat resistant material immediately above the fireplace opening (**see Y** in Fig. 7-2). If there is a wooden mantel, shelf, or other combustible projection above the fireplace, follow the information in Fig. 7-1 or Fig. 7-2.

EXAMPLE: If the fireplace has a combustible projection (mantel or shelf) 20" above the top of the firebox, the maximum horizontal projection out from the face of the fireplace will be:

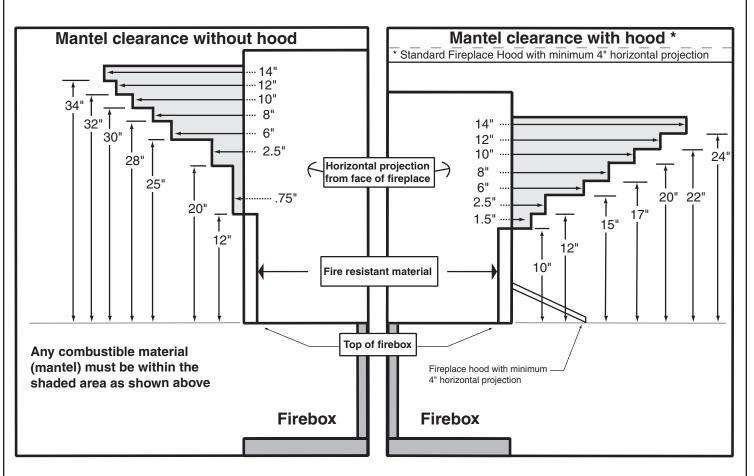

- 1. If a fireplace hood is not installed 2.5" (see Fig. 7-1).
- 2. If a fireplace hood is installed ----- 10" (see Fig. 7-2).

A fireplace hood deflects heat away from the fireplace face and mantel, reducing the potential for heat related warping or discoloration. The use of a fireplace hood is highly recommended.

IF YOU CANNOT MEET THESE MINIMUM CLEARANCES, YOU MUST OPERATE THE VENT-FREE GAS LOG SET WITH THE CHIMNEY FLUE DAMPER OPEN.

MINIMUM CLEARANCES TO COMBUSTIBLES (Cont.)

IF YOU CANNOT MEET THESE MINIMUM CLEARANCES, YOU MUST OPERATE THE VENT-FREE GAS LOG SET WITH THE CHIMNEY FLUE DAMPER OPEN.

PRE-INSTALLATION AND FIREPLACE PREPARATION SAFETY

CAUTION: Installation and repair must be done by a qualified professional installer.

Installer: Carefully read these instructions before installing this gas burner system. Be sure you understand all safety precautions and warnings contained in this manual.

PRE-INSTALLATION AND FIREPLACE PREPARATION SAFETY GUIDELINES

- A. This appliance is only for use with the type of gas indicated on the rating plate. This appliance is **NOT CONVERTIBLE** for use with other gasses.
- B. CAUTION: If not installed, serviced, and used correctly per these instructions, this product can cause serious personal injury, property damage, or loss of life.
- C. WARNING: Before installing in a solid-fuel-burning fireplace, <u>the chimney flue, damper, and firebox must</u> <u>be thoroughly CLEANED</u> of soot, creosote, ashes, and loose paint by a qualified chimney cleaner. Some fireplaces (especially older ones) may need repair prior to installing this appliance.
- **D.** CHECK GAS TYPE (natural or propane): The gas supply must be the same as stated on your burner system rating plate. If gas supply is different, **DO NOT INSTALL**. Contact your dealer for immediate assistance.
- **E.** Any outside air ducts and/or ash dumps located on the floor or walls of the fireplace <u>must</u> be permanently sealed shut before the installation. Use a heat-resistant sealant. Do not seal the chimney flue damper.
- **F.** INSUFFICIENT GAS PRESSURE WILL KEEP THE ODS (OXYGEN DEPLETION SENSOR) PILOT FROM OPERATING PROPERLY. DO NOT USE IF GAS PRESSURE IS LOWER THAN THE MINIMUM REQUIREMENT.
- G. The *minimum* inlet gas-supply pressure for purposes of input adjustment is <u>5</u>" water column (w.c.) on <u>natural</u> gas and <u>11</u>" w.c. on <u>propane gas</u>. Insufficient gas pressure will affect proper operation of the ODS pilot. Do not install this gas appliance if minimum pressure is not available. The *maximum* inlet gas-supply pressure is **10.5**" w.c. on natural gas and **13**" w.c. on propane gas. The propane source must be regulated. (Do not connect this appliance directly to an unregulated propane gas tank this can cause an explosion.)
- **H.** The gas piping system must be sized to provide minimum inlet pressure at the maximum flow rate (BTU/ hr). Undue pressure loss will occur if the pipe is too small, or the run is too long.
- I. The minimum clearance from the fireplace opening to combustible materials on side walls and ceiling must be maintained as outlined in MINIMUM CLEARANCE TO COMBUSTIBLES WALLS AND CEILING.
- J. At least 10"-12" of noncombustible or heat-resistant material is required above the fireplace. A fireplace hood will be required to act as a heat deflector in protecting combustible fireplace surrounds (facing and/or mantel) if certain minimum clearances cannot be met.
- K. Be certain that combustible flooring material (i.e., carpet, tile, etc.) is not too close to this gas appliance. If this appliance is at floor level or less than 6" above the floor, there must be at least 12" of noncombustible material between the base of the fireplace and any combustible flooring.
- L. Input ratings shown in BTU per hour are for elevations up to 2,000 ft. For elevations above 2,000 ft., refer to the National Fuel Gas Code or contact the Robert H. Peterson Company before installing this product.
- M. This gas appliance and its main gas valve must be disconnected from the gas-supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig.
- N. This gas appliance must be isolated from the gas-supply piping system by closing the equipment shutoff valve connected to the gas-supply line during any pressure testing of the gas-supply piping system at test pressures equal to or less than 1/2 psig.
- **O.** Do not use this appliance if any part has been underwater. Immediately call a qualified professional service technician to inspect the appliance and to replace any part of the control system and any gas control that has been underwater.

WARNING

THIS APPLIANCE IS EQUIPPED FOR EITHER NATURAL OR PROPANE GAS. FIELD CONVERSION IS NOT PERMITTED.

INSTALLATION SAFETY INFORMATION

INSTALLATION SAFETY GUIDELINES

- **A.** Carefully inspect the burner and cartons for shipping damage. If any parts are missing/ damaged, call your dealer. **Do not attempt** to install the appliance unless all parts are in good condition.
- **B.** Correct installation of the glass/gems and proper placement and installation of the burner assembly, are imperative to safe operation of your appliance. Problems **WILL** occur if all items are not properly installed. Reference the INSTALLATION section.
- **C.** When installing in a wood-burning fireplace, **center the appliance in the fireplace** while making certain that no part of the assembly protrudes (forward) beyond the face of the fireplace.

DO NOT PUSH THE UNIT ALL THE WAY TO THE BACK.

- **D.** If you use Lava Granules, or glass or gems, for decorative use, do not allow these accessories into or onto any part of the burner or on the glass/gems in the burner. Lava Granules, or glass or gems used to accessorize the vent-free burner, should only be placed on the floor of the fireplace, in front of and to the sides of the burner, but away from the controls.
- E. <u>DO NOT PLACE</u> other accessories, such as wood chips, pine cones, or Lava Granules on this appliance. These items will cause improper burning, sooting, and/or high levels of carbon monoxide. Additional accessories <u>may</u> be placed around the burner system, as long as they do not interfere with the burning of your gas appliance.
- F. Due to high temperatures, this appliance should be located out of traffic and away from furniture/draperies.
- **G.** A fireplace screen must be in place when this gas appliance is in operation. Unless other provisions for combustion air are provided, the screen shall have an opening(s) for introduction of combustion air.
- **H.** Connecting directly to an unregulated propane tank can cause an explosion.
- I. Special care is required if you are installing the unit into a **SUNKEN FIREPLACE**. You must raise the fireplace floor to allow access to gas controls. This will ensure adequate airflow and guard against sooting. Raise the fireplace floor using noncombustible materials.
- J. A vent-free room heater having an input rating of more than 10,000 BTU per hour shall not be installed in a bedroom (ANSI Z21.11.2). If local codes allow, you may install a G8-xxR burner, having a rating of 9,500 BTU, in a bedroom. An unvented room heater having an input rating of more than 6,000 BTU per hour shall not be installed in a bathroom (ANSI Z21.11.2).

OPERATING YOUR UNVENTED GAS APPLIANCE SAFELY AND CORRECTLY

- A. SOLID FUEL MUST NOT BE BURNED in a fireplace where this vent-free gas appliance is installed.
- **B. GLASS DOORS MUST BE FULLY OPEN** when this vent-free gas appliance is operating. This appliance **MUST NOT BE ON** if glass doors are closed, as it can lead to sooting, burner outages, and possibly explosion, causing damage or injury.
- C. WARNING: DO NOT ALLOW DRAFTS INTO OR AROUND THE FIREPLACE. CLOSE (SHUT) HEATING AND AIR CONDITIONING VENTS, RETURNS, AND OUTSIDE AIR VENTS. DO NOT OPERATE FANS (WINDOW FANS, CEILING FANS, FLOOR FANS), WHICH MAY ALTER FLAME PATTERNS. Sooting, excess carbon monoxide, or ODS pilot outages may occur due to drafts.
- **D. WARNING: DO NOT USE A BLOWER INSERT, HEAT EXCHANGER INSERT,** or any other accessory that is not specifically certified for use with this vent-free gas appliance.
- **E.** Make sure there is adequate combustion and ventilation air when this gas appliance is operating. You may need to crack the damper or open a window slightly.
- F. THIS APPLIANCE MUST BE MAINTAINED IN A WELL-CLEANED CONDITION AT ALL TIMES. REGULAR (AT LEAST ONCE PER YEAR) CLEANING OF THE BURNER AND ODS PILOT IS REQUIRED BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN.
- **G.** To light this appliance, it may be necessary to purge the unit for longer than one minute after long periods of non-use.
- H. If you operate this vent-free gas appliance fueled by propane, operating characteristics may vary as the fuel in the tank approaches empty (less than 1/4 full). Sooting and other increases in combustion by-products will occur. Turn off the appliance, refill the propane tank, and have the burners cleaned.
- I. During manufacturing, various parts of this unit are treated with oils or paints. Though not harmful, they may produce annoying smoke and smells as they are burned off during initial operation. This is a normal occurrence. Initial break-in period should last four to six hours; maximum ventilation should be provided by opening windows, doors, or chimney flue.
- J. Keep the area around your gas appliance clear of combustible materials, gasoline, and any other flammable vapors/liquids. Provide adequate clearance for servicing and operation. Be especially cautious if this gas appliance is installed in a basement or converted garage.
- K. Do not place clothing or any flammable material on or near your vent-free gas appliance. Matches, paper, garbage, or any other material must not be thrown on top of the glass/gems, burner, or into the flame.
- L. Young children should be carefully supervised when in the same room with this appliance.
- M. Children and adults should be alerted to the hazard of high surface temperatures and should stay away to avoid burns or clothing ignition.

OPERATIONAL SAFETY INFORMATION (Cont.)

OPERATING YOUR UNVENTED GAS APPLIANCE SAFELY AND CORRECTLY

N. This appliance is intended for supplemental heating, and is not to be used as a primary heating source. Water vapor produced by vent-free burner systems can create moisture problems in a home when operated for extended periods of time. If condensation begins to occur, open your damper or a window.

As a supplemental zone heater, this set should not be used more than six continuous hours per day or more than 40 hours per week. More frequent use indicates that this unit is being used as a primary heat source. The higher presence of carbon monoxide generated by this amount of use can be considered unsafe.

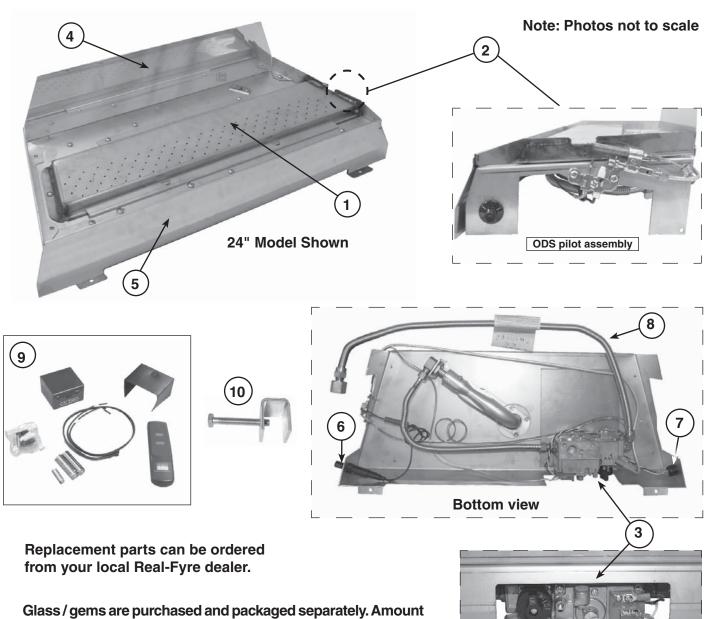

- **O.** If the gas quality is poor or pressure low, your ODS pilot may not stay lit, the burners may produce soot, or the unit may backfire. Contact your local gas supplier immediately.
- **P.** This appliance is designed for adults to be present while in operation. Do not leave this unit burning when <u>unattended</u> or while sleeping. **This is an attended appliance.**
- Q. WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.
- R. WARNING: All previously applied loose material must be removed prior to reapplication. All replacement loose material must be purchased from the original appliance manufacturer.
- S. Unusually tight construction is defined as:
 - **a)** Walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of 1 perm $(6x10^{11} \text{ kg per pa-sec-m}^2)$ or less with openings that are sealed or use gaskets;
 - b) Weather stripping has been added on openable windows and doors; AND
 - c) Caulking or sealants are applied to areas such as joints around window and door frames; between sole plates and floors; between wall-ceiling joints; between wall panels; at penetrations for plumbing, electrical, and gas lines; and at other openings.

CLEANING AND SERVICING IMPORTANT INFORMATION

It is imperative that you maintain your unvented gas appliance by having it cleaned and serviced regularly. A qualified professional service technician shall inspect and service this unit at least annually. (Read and follow the CLEANING AND SERVICING sections on page 17 and 18 for details.)

Failure to provide reasonable and necessary maintenance as outlined in the owner's manual will cause your appliance to malfunction and will void your warranty.

BURNER PARTS LIST

Glass / gems are purchased and packaged separately. Amount will vary, depending on model. Glass / gems are available in various colors; contact your dealer for further details.

Control valve (w/reflector removed)

		18" model		24" model		30" model

WHEN USED AS A VENTED DECORATIVE APPLIANCE (PER ANSI Z21.60b-2004)

This appliance is for installation in a solid-fuel-burning fireplace (masonry fireplace or manufactured fireplace) with a working flue and constructed of noncombustible material.

This burner system may be installed as vented decorative appliance in compliance with ANSI Z21.60b-2004 and National Fuel Gas Code, Section 6.6. The minimum permanent free opening of the fireplace chimney or chimney damper must be met per the Chimney Vent Opening Table on pg 3 of this manual. Chimney damper must be fixed in a manner to maintain permanent free opening at all times. To accomplish this, install a screw or bolt in the edge of the damper to prevent closing, or drill holes in the damper or remove the damper.

BURNER INSTALLATION

BEFORE PROCEEDING, CAREFULLY READ ALL OF THE IMPORTANT SAFETY INFORMATION CONTAINED IN THIS OWNER'S MANUAL. INCLUDING:

- A. Pre-Installation and Fireplace Preparation Safety Guidelines
- B. Ventilation and Confined Space Information
- C. Installation Safety Guidelines

IMPORTANT

Be sure you have read and understand all safety precautions and warnings contained in this manual.

Note: To install the unvented gas burner system, the fireplace must have a gas-supply line that has been installed by a qualified professional service technician in accordance with all local codes. Refer to the PARTS LIST when installing the burner system.

Tools Required:

1. Adjustable open-ended wrench

4. Soapy water solution and brush for leak detection

2. Pliers

- 5. Standard screwdriver
- 3. Propane gas-resistant pipe compound or Teflon 6. Manometer (for checking gas pressure) tape

CHECK GAS TYPE (natural or propane). The gas supply must be the same as stated on the burner system rating plate. If the gas supply is different, DO NOT INSTALL. Contact the dealer for immediate assistance.

WARNING

Do not connect this appliance directly to a high-pressure natural gas line or an unregulated propane tank.

WARNING: Failure to position these parts in accordance with these diagrams or failure to use only parts specifically approved with this unvented burner system may result in property damage or personal injury.

BURNER INSTALLATION (cont.)

REFER TO THE BURNER PARTS LIST WHEN FOLLOWING THESE INSTRUCTIONS.

- 1. MAKE SURE THE FIREPLACE GAS SUPPLY IS TURNED OFF.
- **2.** Locate the gas-supply stub inside the fireplace and remove the cap, if attached (reference Fig. 14-1).
- **CAUTION:** When removing the cap, make sure the stub does not turn, loosening the connection inside the wall.
- **3.** Place the burner system in the fireplace. Center the burner in the fireplace. (Reference Fig. 14-2 for orientation.)
- 4. Be sure gas to the fireplace is off. Remove the adapter that is loosely connected to the flex connector (coming off of the burner system). Attach the adapter to the gas-supply stub using a pipe compound resistant to all gasses. Tighten securely. Then attach the open end of the flex connector to the adapter. Tighten securely. (See Fig. 14-1.)
- 5. LEAK TEST: Turn on the fireplace gas supply, and test at all connections for leaks using the appropriate soapy water solution. If bubbles appear, a leak is present. Turn off the gas and tighten at all connections. Repeat until no leaks are present. If a leak persists, turn off the gas supply and contact the local gas company or dealer. NEVER USE A FLAME TO CHECK FOR LEAKS.
- 6. Using the appropriate hardware for your fireplace construction (not included); secure the burner system into the fireplace floor. The unit has two anchoring tabs, reference Fig. 14-3.
- Remove the protective coating off of the reflective rear panel and front cover. DO NOT use a sharp object to remove coating. Install the front cover onto the front of the burner system (see Fig. 14-4).

Turn off the gas supply prior to proceeding.

REMOTE SYSTEM

Read and follow the separate instructions (packed with the remote) for complete remote installation.

CONTROL SETTINGS

We recommend that before you install the decorative media, you familiarize yourself with the control valve layout. This will help you to be confident operating the burner system when fully installed. See Fig. 14-5 for typical control positions.

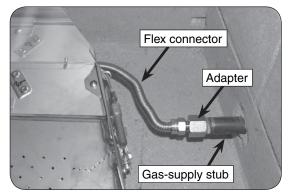

Fig. 14-1 Connect gas supply

Fig. 14-2 Overall orientation (24" shown)

Fig. 14-3 Anchoring tab close up

Fig. 14-4 Front cover installed

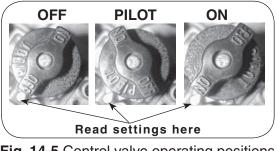

Fig. 14-5 Control valve operating positions

BURNER INSTALLATION (Cont.)

IMPORTANT

For all valves, the air **MUST** be purged from the gas line before the pilot will light and burn properly. The time needed to purge will depend on the length of the gas line to the unit and the amount of time since the unit or gas line was last used. It may take several minutes before all the air is purged and the pilot will light and burn properly. Reference the LIGHTING INSTRUCTIONS section in this manual.

<u>I M P O R T A N T</u>

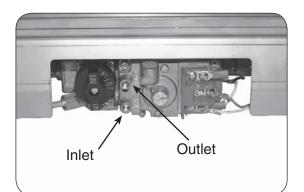

Check the gas pressure with the system burning and the control fully ON.

The burner system and its main gas valve must be disconnected from the gas-supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psig (3.5 kPa). The burner system must be isolated from the gas-supply piping system by closing its equipment shutoff valve during any pressure testing of the gas-supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa). This is accomplished by closing the gas-supply line valve.

CHECKING GAS PRESSURE

Check the valve regulator pressure at the pressure *inlet* point. Turn the inlet screw counterclockwise 2 or 3 turns and then place the tubing of the pressure gauge over the pressure *inlet* point. (The test "inlet" tap is marked **IN**.) After taking the pressure reading, turn the inlet screw clockwise firmly to reseal. Do not over-torque. Check for gas leaks.

Note: Gas pressure should be checked after connecting the gas and prior to any further installation.

GAS PRESSURE SPECIFICATIONS

NATURAL GAS	S	PROPANE GAS		
Outlet pressure reading: (Flame adjustment on high)	3.5" w.c.	Outlet pressure reading: (Flame adjustment on high)	10" w.c.	
Inlet pressure reading	Max. 10.5" w.c. Min. 5" w.c.	Inlet pressure reading	Max. 13" w.c. Min. 11" w.c.	

GLASS / GEMS PLACEMENT (PURCHASED SEPARATELY)

CAUTION: Glass pieces may have sharp edges. Be careful handling the glass. Use hand protection, such as gloves, if necessary.

Glass / gems (purchased separately) must be installed on the burner for the system to operate properly. See the table below for correct amounts of media for each model. Glass / gems are available in various colors; contact your dealer for further details.

Pour the glass / gems directly on top of the burner so that the burner pan is covered completely and evenly (see Fig. 16-1).

Important: Do not add any additional glass / gems to this burner system. Any additional glass / gems may cause unsafe operation.

WARNING: All previously applied loose material must be removed prior to reapplication. All replacement loose material must be purchased from the original appliance manufacturer.

Model	Required to cover burner		
	Fyre Glass	Fyre Gems	
18"	7.5 lbs	7.5 lbs	
24"	10.0 lbs	10.0 lbs	
30"	15.0 lbs	15.0 lbs	

DECORATIVE MEDIA ON FIREPLACE FLOOR (OPTIONAL)

Glass, gems, or Lava-Fyre Granules may be placed on the fireplace floor as an enhancement to the burner system.

If purchased; spread the decorative media <u>on the floor of the fireplace</u>, around the front and sides of the burner system. See Fig. 16-2 for an example (reflective black glass shown).

CAUTION: DO NOT place any of this additional media into or onto the burner system, or behind it.

Fig. 16-1 Glass / gems placement

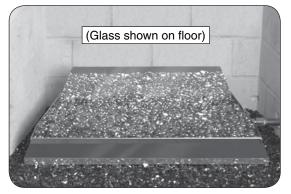

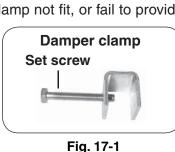

Fig. 16-2 Decorative media floor placement

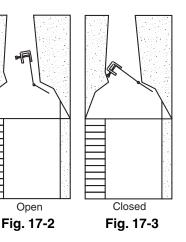

CAUTION: BURN HAZARD. GLASS AND/OR GEMS ON BURNER SYSTEM WILL <u>REMAIN HOT</u> FOR SOME TIME AFTER USE. You must maintain the placement as shown to ensure proper operation of the burner system. If you need to reposition any media to maintain the proper layout, use heat-resistant gloves or allow media adequate time to cool before handling.

DAMPER CLAMP INSTRUCTIONS (IF APPLICABLE)

The damper clamp with hex bolt (Fig. 17-1) is provided as a means to prevent full closure of the damper blade. The clamp is easily attached to most damper blades with pliers or a wrench, and must be permanently installed. The clamp is designed to prevent accidental closure of the damper when installed as illustrated (Fig. 17-2 and Fig. 17-3). Should the clamp not fit, or fail to provide

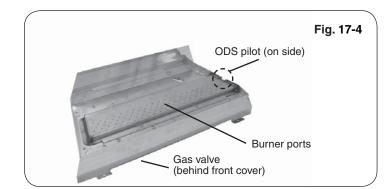

the permanent vent opening specified in Table 3-1, have a permanent stop installed, remove the damper blade, or have the damper cut to provide the minimum permanent opening required.

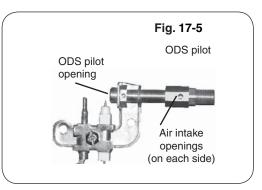

CLEANING AND SERVICING SAFETY INFORMATION

- **Note:** Regular cleaning and servicing will be necessary to ensure proper ODS pilot operation and proper burn characteristics.
- A. Always shut off the gas to the burner system while performing service work.
- **B.** Allow the burner system to cool before servicing.
- C. Installation, service, and repair must be done by an NFI Certified or other qualified professional service technician. The appliance MUST be inspected before use, and cleaned at least annually to prevent burner shutdown, sooting, odors, etc. by a qualified professional service technician. It must be checked for clean burning operation and proper ODS pilot appearance, with the correct tools to service this unit. More frequent cleaning may be required. Excessive lint can build up on this unit from carpeting, bedding material, pet hairs, or other particles in the air. It is imperative that <u>all</u> control components and compartments, burner(s), and circulating air passageways of the appliance be kept <u>clean</u> and free of all obstructions. The ODS pilot is especially sensitive to a dirty environment and will not function properly if dirty. Make certain all air openings are clean and free of obstructions, including:
 - 1. The air intake openings on the ODS pilot assembly.
 - 2. The ODS pilot opening.
 - 3. The air shutter on the burner.
- **WARNING:** Failure to keep the primary air openings of the burner clean may result in sooting and property damage.
 - 4. All of the ports on the burner. (See the CLEANING AND SERVICING section.)
- D. Any safety screen or guard removed for servicing must be replaced prior to operating this burner system.

CLEANING AND SERVICING

Only limited cleaning will be required under normal use of the burner system.

TO CLEAN THE BURNER SYSTEM

- **1.** Remove the glass / gems. Use a vacuum cleaner to remove loose particles from all surfaces of the system. Do not use cleaning fluids.
- 2. Dust the the assembly and the burner. Using a compressed air duster (commonly available at computer, electronic, or office supply stores); blow through all of the burner ports. See Fig. 16-4 on the previous page for locations.
- 3. Reinstall the glass / gems as instructed in this manual.

If, after a period of use, the flames start to exhibit unusual shapes and behavior, or the burner fails to ignite smoothly, the burner ports may require some cleaning. If this happens, it is preferable to contact the nearest dealer to get the burner system serviced.

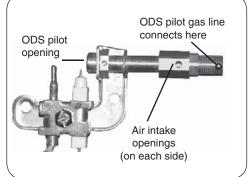

Fig. 18-1

Do not remove the rating plates or the warning tags. These are an integral safety and identification component of this appliance.

During periods of heavy use, inspect the burner system frequently for evidence of sooting. If sooting is present, discontinue use until the source of sooting is corrected.

CLEANING AND SERVICING THE ODS PILOT

Periodic cleaning and maintenance of the burner system is recommended to ensure that the burner system operates properly. Cleaning of the ODS pilot system is an important part of the maintenance program.

This ODS pilot cleaning procedure must be performed by a qualified professional service technician familiar with the specific characteristics of the burner system.

- Turn the burner system to the OFF position and allow it to cool. Inspect the ODS pilot area (see Fig. 18-1) for any
 visual contamination or debris (usually lint, hair, spider webs, or small insects). Lightly brush off all external
 surfaces while vacuuming loosened debris from the ODS pilot opening. Be careful not to brush any foreign
 material into the ODS pilot opening.
- 2. Clean out the air intake openings (see Fig. 18-1) by lightly brushing around the openings while vacuuming.
 - **Note:** It is very important that the air intake openings be kept clear of debris. Should the openings become blocked, the ODS pilot system will not operate properly.
- **3.** Light the ODS pilot according to the relevant LIGHTING INSTRUCTIONS page. Periodically verify the ODS pilot flame appears as shown in the CHECKING THE ODS PILOT FLAME APPEARANCE section.
- 4. If the ODS pilot flame does not burn as indicated in the instructions, extinguish the ODS pilot by turning the valve to the full **OFF** position. Using a compressed air duster, insert the flexible nozzle through the air intake openings, ensuring that the nozzle is pointed toward the ODS pilot opening (see Fig. 18-1). Blow air through the intake openings to clear out any debris that may be in the system.
- 5. Relight the ODS pilot and inspect it to be sure it is burning as shown in the instructions. If not, extinguish the ODS pilot and turn off the gas supply to the burner system. Using an adjustable or a ¹/₄" wrench, disconnect the ODS pilot gas line (see Fig. 18-1) from the valve.
- 6. Insert the flexible nozzle of the compressed air duster and blow air into the input end of the ODS pilot gas line to remove any blockages. Do not blow air directly into the ODS pilot opening. Blow air in the direction of the gas flow.
- 7. Reinstall the ODS pilot gas line and check for leaks.
- 8. Light the ODS pilot to make sure it is operating properly (see LIGHTING INSTRUCTIONS).
- **9.** If the ODS pilot still does not operate properly, the ODS pilot may need to be replaced with the same model as the one on the unvented burner.

OPERATING THE BURNER SYSTEM

Observe the flames. The main burner flames should be blue at the base and a combination of blue / yellow at the body and at the tips. They should be 5" to 8" above the glass / gems, with the center flame being the tallest (see Fig. 19-1).

Every Real-Fyre unvented burner system leaves the factory tested and quality checked to ensure that it has been manufactured to the strict specifications to which it was submitted and approved for certification. This check includes an operational test to ensure both satisfactory combustion and operation.

Fig. 19-1

Each installation site for any unvented appliance presents its own unique combustion environment. Specific factors such as weather-tightness of the home, size of the room in which the burner system is installed, central heating, ceiling fans, altitude, drafts, pet hair, carpet lint, dryer lint, the size of the fireplace, paint or soot inside the fireplace, etc. all have an influence on the proper operation of an unvented appliance and its ODS pilot system. A normally operating burner system will demonstrate the following characteristics:

- A lively, realistic flame. The flame will be blue / yellow.
- Clean-burning combustion that will produce no soot or smoke after normal break-in.
- Production of no odor, other than normal odors associated with the combustion of propane or natural gas.
- Production of water vapor. Water vapor helps to increase indoor humidity, which may be beneficial during the dry heating season.

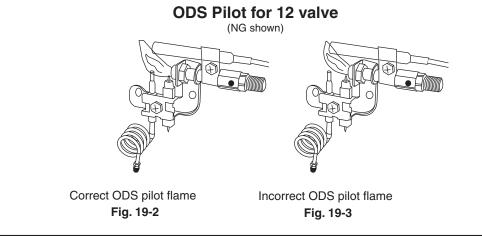

If you operate the burner system fueled by propane gas, operating characteristics may vary as the fuel in the tank approaches empty (less than 1/4 full). Sooting and other increases in combustion by-products will occur. Turn off the burner system and refill the propane tank.

CHECKING THE ODS PILOT FLAME APPEARANCE

WARNING: NO ADJUSTMENTS ARE TO BE MADE TO THE ODS PILOT SYSTEM. TAMPERING WITH THIS SYSTEM CAN BE EXTREMELY HAZARDOUS.

When installing the burner assembly, it is important to visually check the ODS pilot flame and the burner flames.

- 1. The ODS pilot flame must be present when the burner is operating. The flame should touch the top of the thermocouple tip (Fig. 19-2).
- 2. If the ODS pilot flame does not touch the top of the thermocouple tip, then the main burner will not function properly (see Fig. 19-3 for incorrect ODS pilot flame).
- 3. With the burner off and the ODS pilot flame off, and the assembly cool, check the burner assembly, air intake openings on the ODS pilot, and air shutter openings on the burner for any blockages that could affect the operation of the ODS pilot flame.

LIGHTING INSTRUCTIONS - SERIES 12 VALVE FOR YOUR SAFETY, READ BEFORE LIGHTING

WARNING

If you do not follow these instructions exactly, a fire or explosion may result, causing property damage, personal injury, or loss of life.

Do not use this appliance if any part has been underwater. Immediately call for a qualified professional service technician to inspect the appliance and to replace any part of the control system and any gas control that has been underwater.

The Real-Fyre[®] burner system has an ODS (Oxygen Depletion Sensor) pilot that can be lit by using the built in piezo ignitor switch on the burner, or by hand using a match or long necked lighter. When lighting the ODS pilot, follow these instructions exactly.

BEFORE LIGHTING, smell all around the burner area for gas. Be sure to smell next to the floor as some gas is heavier than air and will settle on the floor. IF YOU SMELL GAS, FOLLOW THE INSTRUCTIONS ON P. 1.

Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don't try to repair it. Call a qualified professional service technician. Force or attempted repair may result in fire or explosion.

LIGHTING THE ODS PILOT

To read the safety valve control knob (Fig. 20-1), read the marking nearest the teardrop-shaped metal pointer.

- 1. If the safety valve control knob is in the **PILOT** position, push in slightly on the knob and rotate it clockwise to the **OFF** position.
- 2. Release knob and wait five minutes.
- **4.** Push and hold the safety valve knob fully in and push in the piezo ignitor button several times until the ODS pilot lights.
- **5.** Hold the safety valve knob in for approximately 60 seconds before releasing.
- If the ODS pilot does not stay lit, turn the safety valve knob clockwise

 to the full OFF position.
 Wait five minutes, then repeat steps 3 through 5.

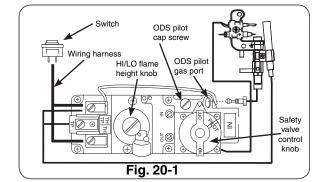

IGNITING THE MAIN BURNER

With the ODS pilot lit, turn the safety valve knob counterclockwise \checkmark to the **ON** position. Flip the switch control to the **ON** position and the burner will light. Refer to the PARTS LIST for the switch location.

SHUTTING OFF THE MAIN BURNER

SHUTTING OFF THE ODS PILOT

Be sure the switch control is **OFF** and depress and turn the safety valve knob clockwise \frown to the **OFF** position.

When shutting your burner down, be sure to <u>TURN THE</u> <u>FLAME FULLY OFF</u> (to **PILOT** or **OFF**). Make sure the burner is completely off for <u>one minute before relighting</u>.

ADJUSTING THE ODS PILOT

- **a.** The ODS pilot flame should encircle the generator tip, and is preset at the factory (Fig. 20-2). Ordinarily, the ODS pilot will not require field adjustment.
- b. If adjustment is necessary, remove the cap screw (Fig. 20-1) and turn the smaller gas adjustment screw inside counterclockwise → to increase the ODS pilot flame, and clockwise → to decrease the ODS pilot flame. Replace the cap screw.

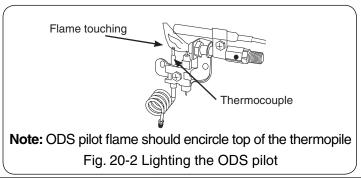

MAINTENANCE

Your pan burner is equipped with a safety ODS pilot that will shut off the gas supply in case the ODS pilot is not burning or functioning properly. Make sure the ODS pilot is adjusted properly and that the generator spade clips are tightly connected to the terminal screws on the valve. If the ODS pilot will not stay lit, call your local gas utility or gas supplier.

A periodic check of the following should be performed at least annually by a qualified professional service representative:

- 1. Valves and switch for proper operation.
- 2. Flue system for rust, damage, or leaks.
- 3. Damper operation.
- 4. Orifices for dirt or other foreign matter.
- 5. Visual check on the burner.

If this unit was shipped with a remote, or if a remote system was installed later, read and follow the separate remote instructions to operate the burner remotely.

TROURI ESHOOTING

-	

Ι.

outside air vents near or blowing

	IROUBLESHOUTING					
	• ONLY A QUALIFIED PROFESSIONAL SERVICE PERSON SHOULD SERVICE AND REPAIR THIS APPLIANCE. • TURN OFF UNIT AND ALLOW TO COOL BEFORE TROUBLESHOOTING					
1	1) BURNER SHUTTING DOWN DURING OPERATION					
	POSSIBLE CAUSE	SOLUTIONS				
Α.	Insufficient or excessive gas pressure	A1. Check gas pressure (check with local gas company). For natural gas, pressure must be minimum 5" w.c. at fireplace with burner operating. Maximum inlet gas pressure is 10.5", w.c. Reading at inlet pressure tap (farthest to valve inlet) on remote-capable valves burners should be 5" w.c. (minimum). With the knob on high, maximum inlet pressure is 10.5" w.c.				
burner syster		A2. Other gas appliances may be on the same gas line, dropping gas pressure to the burner system. Check pressures with everything operating to ensure adequate pressure.				
В.	Foreign debris in or around the fireplace and around the air intakes of the ODS pilot	B. Dust, carpet fibers, paper, spider webs, pet hair, etc. in fireplace or on burner assembly can affect operation of burner and ODS pilot assembly. Clean out debris and vacuum around burner for accumulated dust. Vacuum or use compressed air to clean out the ODS pilot assembly area, air shutter hole, burner orifice(s), and ODS pilot air intake openings. Blockage in this area will affect the operation of the ODS pilot assembly.				
C.	Room size (unconfined space)	C. 50 cu. ft. is required for every 1,000 BTU. Multiply the room's length x width x height by 20 (L x W x H x 20). If resulting number is less than the BTU rating of the burner, ODS pilot outages may occur. Provisions for adequate combustion and ventilation air must be made (see VENTILATION AND COMBINED SPACE SAFETY INFORMATION).				
D.	Flue area, fireplace, or damper dirty from soot	D. Clean around, above, and under damper thoroughly. Clean fireplace, removing loose material, including soot and creosote.				
E.	Fans, furnaces, air conditioning vents, returns, or fireplace	E. Eliminate drafts by closing heating and air conditioning vents, returns, and closing outside air vents. Fans blowing directly into the fireplace should be turned off when				

set is operating.

into fireplace may create drafts, altering flame patterns F. Blockages on burner F. Vacuum any Lava Granules or material that may have fallen onto burner port area. G. Open window or damper slightly. Move burner forward if possible, or otherwise G. Fireplaces with high top cavities can accumulate by-products increase ventilation. of combustion, which can start recirculating, causing shutdown H. Insufficient air circulation H1. Check glass / gems placement and sizing of burner system (check your owner's manual for proper placement and requirements). Reposition burner closer to the front of fireplace. (Note: Do not place burner too close to combustibles.) (See INSTALLATION SAFETY GUIDELINES section.) H2. Check for sunken fireplace, excessive lava rock, or other accessories packed too tightly against burner or high bottom lip on glass door. Open window or damper slightly. Fireplace too small for unit Ι. Ensure minimum requirements are met (see FIREPLACE SIZE REQUIREMENT section).

J. At high altitude, too much heat J. Open a window or the damper slightly or otherwise increase the ventilation. Your set may not be certified for use over 2,000 feet. Check your owner's manual. or moisture can cause ODS pilot to shut down system K. ODS pilot flame lifting off **K.** Check gas pressure (see item A1 in this table). thermocouple/generator L. В.	Ignitor electrode positioned incorrectly	В.	Contact your dealer for service				
8)		0	DORS				
Α.	New burner system (break-in period)	Α.	Burn unit for four to six hours with damper, doors, or windows open. Allow odors to dissipate.				
В.	Odors created by aerosol sprays, detergents, household chemicals, and insecticides	В.	When these odors are drawn into the fireplace, this may cause objectionable odors. Thoroughly ventilate the area before restarting your burner system.				
C.	Gas leak	C.	Locate gas leak and correct all leaks.				

TROUBLESHOOTING (Cont.)				
POSSIBLE CAUSE	SOLUTIONS			
9) SOOTING				
A. Low gas pressure	A. Check gas pressure.			
B. Drafts in room	B. Eliminate drafts by closing heating and air conditioning vents, returns, and outside air vents. Fans blowing directly into fireplace should be turned off when system is operating.			
C. Air shutter(s) blocked	C. Burner air shutter(s) are blocked with debris. Vacuum debris in and around burner area.			
D. Using a product other than Real-Fyre [®] glass / gems with burner	D. Make sure only Real-Fyre [®] glass / gems are used with your vent-free burner.			
E. Using natural gas burner on propane gas or propane burner on natural gas	E. Make sure burner is set up for the gas you are using. Check nameplate attached to burner. Call your dealer immediately if nameplate does not match the gas you are using.			
F. Adding any accessories to burner system	F. Shut down burner system and take off any accessories that do not belong with the system.			
G. Blocked orifice(s) or air shutter(s)	G. Dust, lint, fibers, paper, spider webs, pet hair, etc. in the fireplace and on the burner assembly can affect the operation of the burner and the ODS pilot assembly. Clean out the debris and vacuum around burner for dust that may have accumulated over time. Vacuum the ODS pilot assembly and over the air shutter holes. Any blockages in this area will affect the operation of the ODS sensor.			

10)

11)

ODS PILOT WILL NOT STAY LIT WHEN KNOB IS RELEASED

A. Haven't held knob in long enough

A. Hold knob in for 1 minute and release. If the knob doesn't hold, contact your dealer for service (valve replace or new ODS).

WHISTLING NOISE COMING FROM BURNER

A. Burner may be cold or may have not been used for a prolonged period of time	A. Allow burner to warm up on low.
B. Air in gas line	B. Contact your gas company.
C. Clogged air openings	C. Clean all air openings.

WARNING: If the gas quality is bad, the burners will produce soot and/or your pilot will not stay lit. Contact your gas company.

WARRANTY

PETERSON VENT-FREE DECORATIVE GAS APPLIANCE LIMITED WARRANTY

All Peterson vent-free ceramic refractory gas logs are WARRANTED for as long as you own them (lifetime).

All Peterson vent-free fiber ceramic gas logs are WARRANTED for SEVEN (7) YEARS.

All Peterson glass is WARRANTED for TEN (10) YEARS.

All Peterson vent-free burner component parts, except valves, ODS pilots, and controls, are WARRANTED for TEN (10) YEARS.

All Peterson valves, ODS pilots, and controls are covered by a ONE (1) YEAR Limited Warranty (excluding batteries).

PLEASE KEEP A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE

This warranty applies to the original purchaser and to single family residential use only. It commences from date of purchase, and is valid only with proof of purchase.

This warranty does not cover parts becoming defective through misuse, accidental damage, electrical damage, improper handling, storage, and/or installation. Product must be installed (and gas must be connected) as specified in the instructions or operator's manual, by a **qualified professional installer**. Accessories, parts, valves, remotes, etc., when used must be Peterson Co. product.

This warranty **does not** apply to rust, corrosion, oxidation, or discoloration, unless the affected component becomes inoperable. It **does not** cover labor or labor-related charges.

This warranty specifically excludes liability for **indirect**, **incidental**, or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that may vary from state to state.

For additional information regarding this warranty, or to place a warranty claim, contact the R.H. Peterson dealer where the product was purchased.

TO REGISTER YOUR PRODUCT ONLINE GO TO: WWW.RHPETERSON.COM, AND CLICK ON PRODUCT REGISTRATION. THANK YOU FOR YOUR PURCHASE.

WHEN USED IN THE

COMMONWEALTH OF MASSACHUSETTS

INSTALLATION OF THIS APPLIANCE MUST BE PERFORMED BY A MASSACHUSETTS LICENSED PLUMBER OR GAS FITTER ONLY.

THE INSTALLATION OF THIS APPLIANCE MUST CONFORM TO THE BOARD OF FIRE PREVENTION REGULATIONS 527 CMR 30.00 UNVENTED PROPANE OR NATURAL GAS-FIRED SPACE HEATERS.

This vent-free gas appliance is designed for use in a standard wood-burning fireplace. It is designed to be used with an external wall switch or external remote thermostatic control system. Models with the suffix 12(P) or 01(P) are designed to be used with an external wall switch or an external remote wall thermostatic control system.
